## ACT Enterprise – Ports and Protocols

This document contains a complete list of the ports and their uses within ACT Enterprise. It's worth noting that not all these ports are used in every installation and depend on the features enabled in the software.

A basic installation, utilising no additional features will only use port 8000 for the software, and 10001 for controller comms.

Please note, this information is for internal use only, and should only really be released if someone has network issues. There is no need to describe the purpose of the ports to the customer, these are for your reference only.

# SUPPORT INFORMATION

## Ports:

/// 8000 - Private API service endpoint  
/// 8001 - Private API metadata (only in Debug mode)  
/// 8002 - Public API endpoint (only if licenced)  
/// 8003 - Public API metadata endpoint (only if licenced)  
/// 8004 - Public Uint API  
/// 8005 - Public Uint API metadata  
/// 8006 - No-Session binding for Passwords  
/// 8007 - Mobile Service endpoint  
/// 8008 - Mobile Service metadata endpoint
