4. Summary of Major Features / Functionality Added

None

5. Issues Resolved – since previous release V27.7.1.18

- Client does not close when the auto logout time comes when a pop-up window is open
- No event is logged for communication events
- AxTraxNG will not load with an empty DB when a DB connection error is shown
- Cannot add a PIN code that begins with the number zero (0)
- When an x-805 (piggyback) is not detected, AxTraxNG will remove it and then initiate the panel
- Does not start the webcam application
- Client stops responding when more than 10K cards are saved in the DB
- Biometric templates are not downloaded until the service is started again
- Employee UI is fragmented on Russian and Serbian language.
- Bio8000 remote enrollment over remote network failed.

6. Known Issues

- When a Bio 8000 and Bio 9000 biometric series device are used at the same site, users must enroll on the Bio 8000 and the Bio 9000 device with the same 10-finger GUI.
- The ViTrax[™] pop up video stream may be delayed a few seconds before displaying.
- The Snapshot pop-up cannot be seen from some cameras connected to ViTrax.
- A fingerprint cannot be enrolled from Bio 9000 devices while it is set to Live Fingerprint Detection.
- Access Area occupancy report shows last day data.
- Credentials not imported for user in Unauthorized access group.
- The server overrides panel decisions regardless of the reader Wiegand format.

7. Miscellaneous

- Make sure that the Boot Loaders that are in the control panels and expansions are matched with the version of the control panels so that the firmware update process will be successful.
- Boot Loaders for the control panels and expansions are not public information for this release note and are only known by Global Tech Support Group (TSG) and Rosslare Manufacturing teams.
- The license supports 32 Biometric terminals (license can be extended).
