Milestone Interconnect™

The Open Platform Company

Connecting remote sites for cost-efficient distributed surveillance

Milestone Interconnect is a unique system concept that allows most Milestone video management software (VMS) to be interconnected with Milestone's premium software XProtect® Corporate. Milestone Interconnect provides a flexible way to centrally manage surveillance operations across geographically dispersed sites. Milestone Interconnect combines cost-efficient remote Milestone VMS solutions with the advanced surveillance

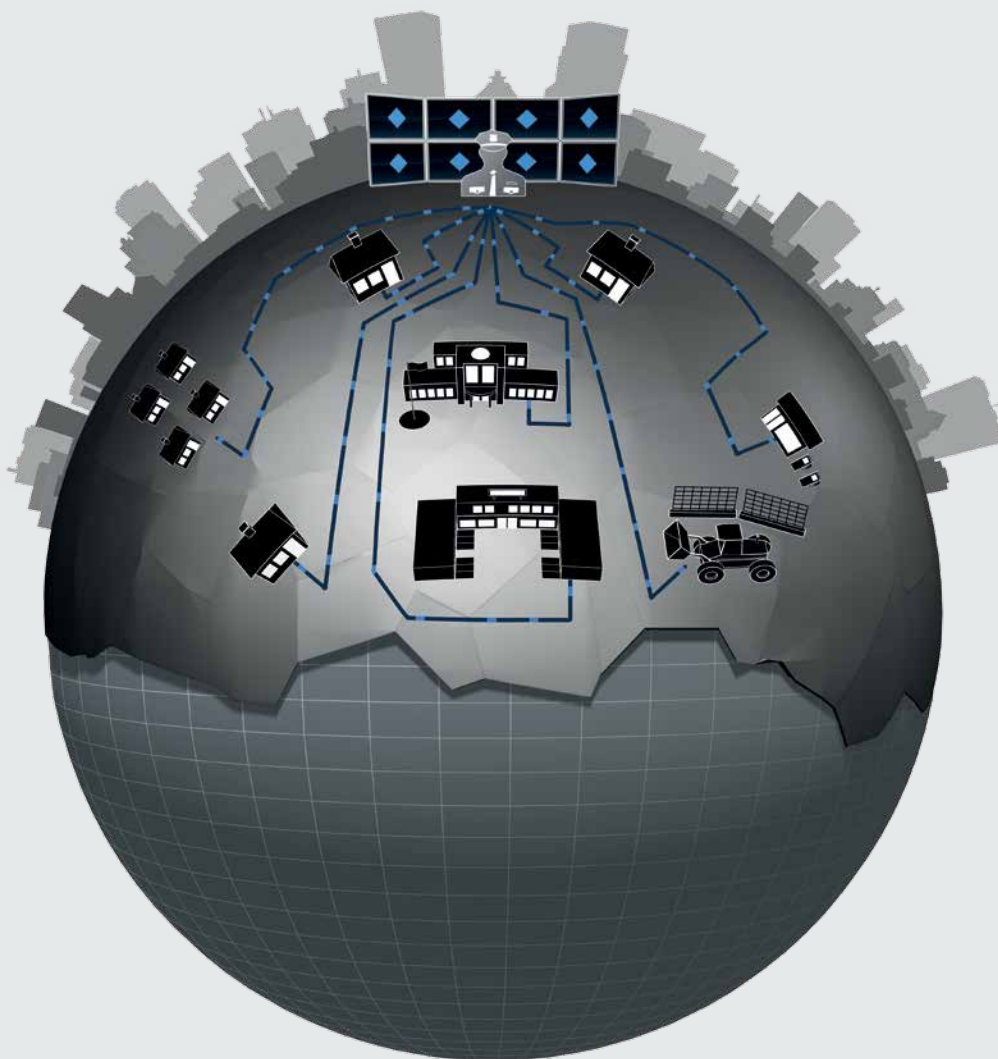

functions of XProtect Corporate in one cohesive and powerful security solution.

The ability to detect incidents and remotely manage interconnected sites from one central system reduces operation costs and the need for on-site visits. Its intelligent video storage makes optimal use of available remote and central storage and network resources.

Milestone Interconnect is ideal for centralized surveillance

The basic framework of Milestone Interconnect is simple. The central system, such as a company's headquarters, can use XProtect Corporate to connect remote offices or sites to the system. The remote sites can be located anywhere and can select the optimal XProtect® VMS for their budget and needs.

When remote sites are interconnected, operators in the central system can access video and receive alarms from the connected sites, creating one unified surveillance system. At the same time, each interconnected system is independent and video can be accessed and managed locally.

Benefits of Milestone Interconnect

- Provides a cost-efficient central surveillance operation because it works with a wide range of XProtect software so remote sites can select the software that best suits their size and need
- Reduced need for local security personnel at each remote site because central operators have full access to live and recorded video from all remote sites
- Recordings for investigation and forensic handling can be collected by uploading video from the remote site to the central system, eliminating the need for local evidence handling
- Lower system maintenance costs and reduced need for on-site service visits because systems can be managed remotely

Milestone Interconnect creates a world of opportunities

Cost-efficient retail solution

Retail chains with many stores spread out across a region, such as gas stations and convenience stores, gain cost-efficient remote surveillance using Milestone Interconnect. The headquarters can monitor all local stores, providing 24/7 surveillance and continuous security while using fewer resources.

Milestone Interconnect also provides easy and fast deployment of the surveillance operation. After setting up one of the remote sites, settings can be copied and applied to all of the stations, helping reduce installation costs.

Mobile surveillance solution for transportation

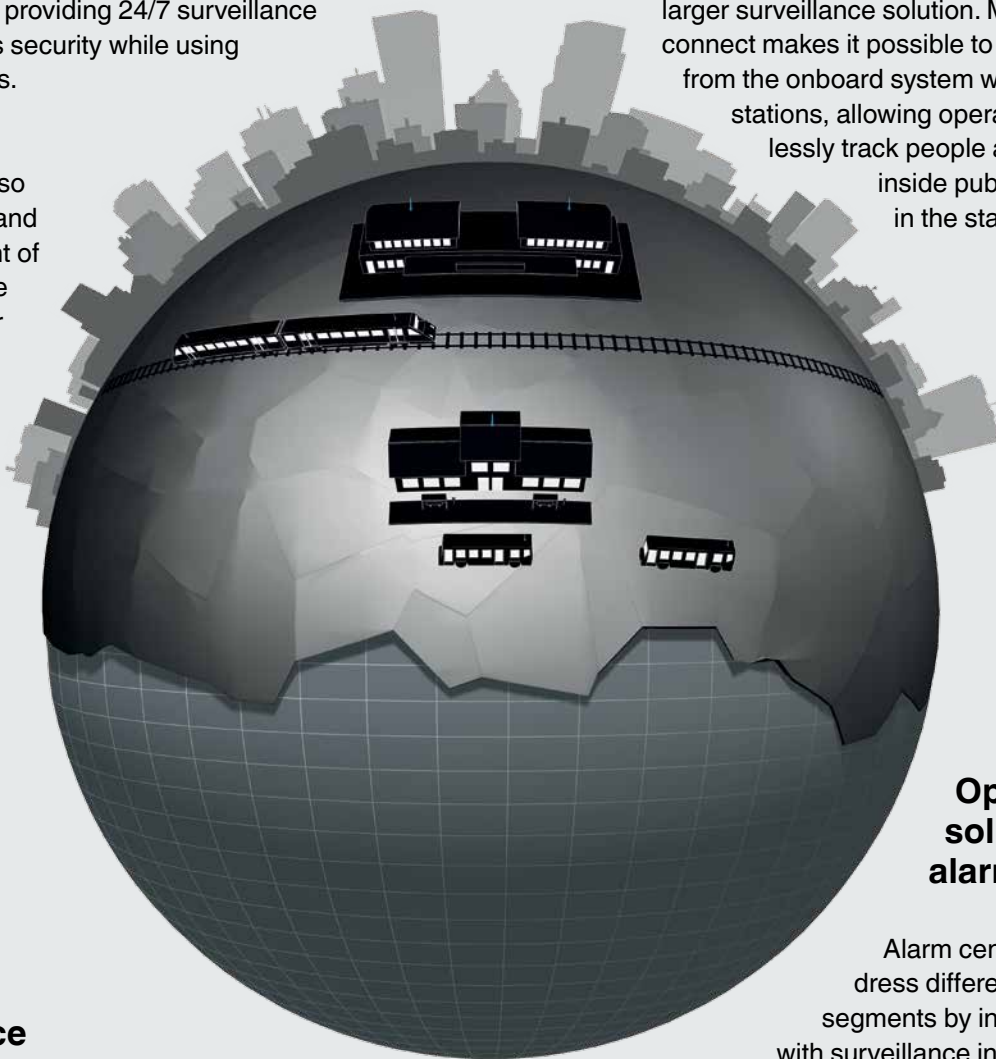

Milestone Interconnect is an ideal solution for transportation vehicles with an intermittent network connection. Recordings are stored onboard and when a public transport vehicle arrives at an overnight garage with network connection, relevant video is transferred to the central system whether by schedule or on demand. This eliminates the need for manual video handling and physical media storage, helping reduce costs.

Onboard mobile video surveillance on public transportation vehicles helps combat theft, vandalism and threats to personnel and passengers. Independent onboard video systems mounted in vehicles can be part of a larger surveillance solution. Milestone Interconnect makes it possible to combine video from the onboard system with video from stations, allowing operators to seamlessly track people and objects inside public transit and in the station.

Optimized solution for alarm centers

Alarm centers can address different customer segments by interconnecting with surveillance installations ranging from just a few cameras to several hundred. Situational awareness functions, including interactive maps and prioritized alarm lists, help alarm centers to reduce operational costs by combining on-site patrolling with central surveillance. Alarm operators can also validate an alarm before dispatching a guard.

Milestone Interconnect provides proactive alarm monitoring because alarm notifications are sent to the central system when there are issues in the connected systems.

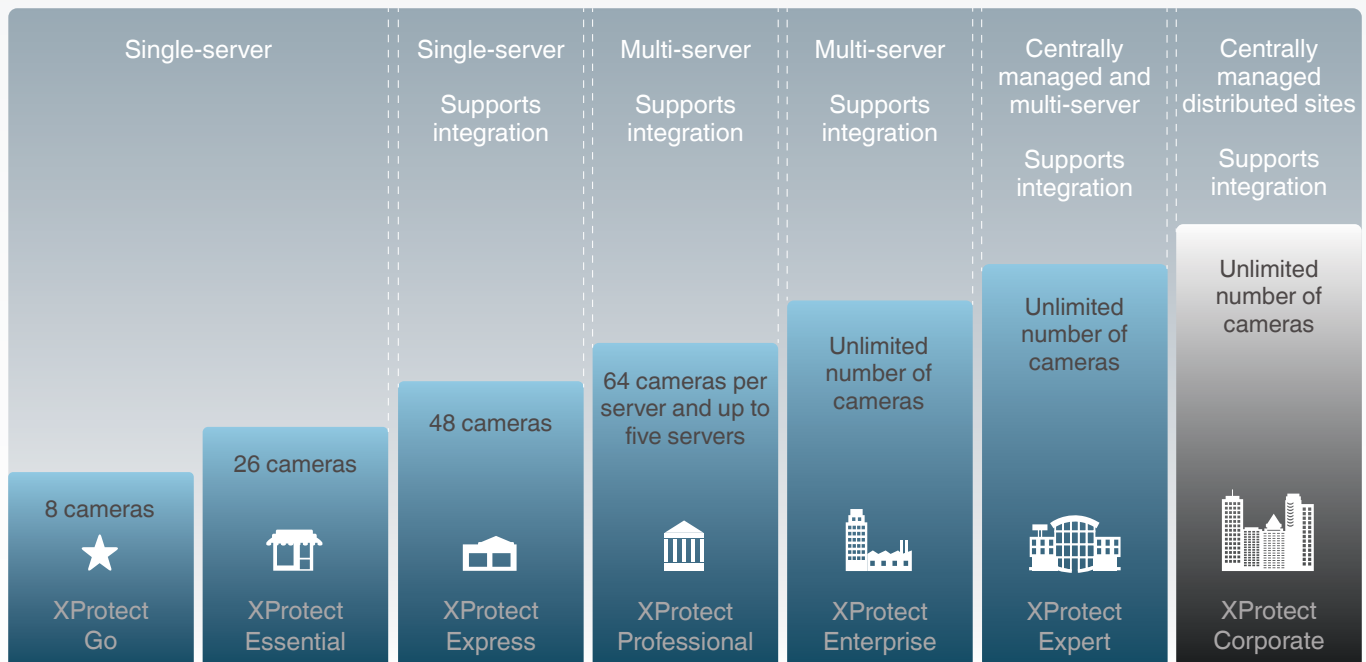

Milestone Interconnect: Enhancing XProtect Corporate

High performance for high security

XProtect Corporate is a powerful IP VMS designed for large-scale, high-security deployments. Its single management interface enables efficient management of the system and all connected cameras and security devices, regardless of the system size or if it is distributed across multiple sites. For systems demanding supreme situational awareness and precise response to incidents, XProtect Corporate has interactive maps linked to alarms and built-in support for Milestone's video wall functionality.

XProtect Corporate provides the ultimate system reliability for high-security installations. Edge Storage support combined with Failover Recording Servers and redundant management servers, ensure video recordings are never interrupted and access to the system is always maintained.

About Milestone Systems

Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-in-class solutions to video enable organizations – managing risks, protecting people and assets, optimizing processes and reducing costs. Milestone software is sold through authorized and certified partners. For more information, visit: www.milestonesys.com
