1. Before Starting Program

1.1 Product Introduction

1.1.1 Outline

UNIS v4 is a program that effectively operates a fingerprint recognition, card, a face recognition, and mobile card terminal. It integrates and manages each terminal and users through network. Real-time monitoring of authentication status is allowed, and authentication record of users can be searched and viewed.

This manual explains how to install UNIS that can monitor and manage a terminal by linking with the terminal.

1.1.2 Product Configuration

1.1.3 Minimum & Recommended Specification

Menu	Minimum Specification	Recommended Specification
Process (CPU)	Pentium 4 3.0	Pentium 4 Dual Core, 1.6Ghz or higher
OS	Windows XP or higher	Windows 7 or higher

Memory (RAM)	DDR2 2048MB or higher	DDR2 4096MB or higher
--------------	-----------------------	------------------------------

1.1.4 Product Support Information

Company: UNION COMMUNITY CO.,LTD.
 Home page Address: <http://www.virditech.com/>
 Address: Please refer our homepage
 Contact number: 1800 - 6830

1.2 Product Installation

If the program CD is inserted, installation process starts automatically.

If installation process does not start automatically, run Setup.exe in CD to start manually.

1. Installation

Select the installation path: the default installation path-C: □ Program Files □ UNIS

Server: The full version installed on the main PC (server version)

Client: Main PC Other Remote Manager Client version only for program management

Installation Complete

※ **Firewall exception handling in each OS Type: After installation, the program does not run and Terminal disconnection Exception handling for your PC's firewall please.**

▶ **Regarding to how to the firewall exemption from operating system, please refer Microsoft Homepage below and find the user guide in each OS Type.**

<http://windows.microsoft.com/en-US/windows-8/Windows-Firewall-from-start-to-finish>

1.3 Authentication Method

The following authentication methods are supported and a combination of these methods can also be used.

■ Fingerprint Authentication

This is a method that confirms authentication rights using fingerprint.

■ 1:1 authentication

As a method that enters fingerprint after entering ID, a registered fingerprint that corresponds to ID and an entered fingerprint are compared on 1:1 basis. Authentication process time is short.

- 1:N authentication

This is a method that authenticates fingerprint from the entire registered fingerprints without entering an ID. This method is simple but processing time is long compared to 1:1 authentication method when there are many users.

- Fingerprint card authentication (TOC)

After storing user's fingerprint information in the smart card, the fingerprint entered during authentication and the fingerprint stored in the smart card are compared for authentication. Since a storage medium other than smart card is not required, system security can be increased.

- Password Authentication

This is a method that checks access rights using 4~8 digits password. It is used when fingerprint cannot be used.

- Card Authentication

This is a method that authenticates using RF card that a user has. Card number must be registered in the system to use it.

- Face Authentication

This is a method that authenticates registering a user's face in a system. It can be used with the terminal that supports the face authentication functions.

- Mobile Key Authentication

This is a method that authenticates in a smart phone. This function can be used with the terminal that supports the mobile key function. Regarding to the method for using the mobile key, please refer the user manual.

1.4 Procedures for Fingerprint Recognition Sensor Use

- Basics of Fingerprint Registration

Fingerprint registration is the most important process in using the fingerprint recognition device. Fingerprint must be accurately and properly registered in order to successfully recognize fingerprint.

- Fingers Used during Registration

The use of index finger, middle finger and ring finger is recommended for registration. However, the use of thumb and little finger should be avoided. As it is difficult to place thumb and little finger on the fingerprint recognition sensor window properly, it is difficult to acquire accurate fingerprint image.

■ Proper Fingerprint Input Procedures

- 1) When the fingerprint recognition sensor blinks, place the finger on the sensor window.
- 2) After placing the fingertip at the fixing guide of the sensor window top as shown in the figure, place and fix the finger tightly between the fixing guides of the sensor window top and bottom.

Figure 1 [Proper Fingerprint Input Method]

- 3) Press with adequate pressure as if stamping with finger. Do not apply too weak or too much force.
- 4) The finger should not be leaned to top, bottom, left and right of the fingerprint recognition sensor window as shown in the figure. Do not input only the fingertip or do not input fingerprint while rotating finger.

Figure 2 [Improper Fingerprint Input Method]

■ Proper fingerprint registration method

When fingerprint is entered, fingerprint registration can be adjusted after viewing the acquired fingerprint image condition as in the following descriptions. The following are required fingerprint image conditions.

■ Fingerprint core location

The fingerprint core area represents the ridge area where bending is the largest. The area inside blue circle in the below fingerprint image represents the core area. In general, such core area is located in the center of fingerprint. Using fingerprint core position shown during fingerprint registration, the finger can be placed so that the center area of fingerprint can coincide with the center of the sensor window. It is necessary to acquire fingerprint whose core

is located in the center of an image captured during registration process. Registered fingerprint should not be twisted and it must be directed vertically.

Finger 3 [Proper Fingerprint Core Position]

Finger 4 [Improper Fingerprint Core Position]

Figure 5 [Wrong Direction Input]

■ Fingerprint image quality

Fingerprint image quality is determined by the condition of fingerprint image ridge pattern. Fingerprint with large-sized scar, fingerprint with poor condition due to eczema, dry fingerprint and wet fingerprint usually produce low-quality image.

Figure 6 [Wet Fingerprint]

The fingerprint images shown above are produced due to wet finger or due to excessive applied pressure during fingerprint input. The solution to the above condition would be to reduce the applied pressure or wipe the wet finger with towel. Doing these things can help produce good-quality image.

Figure 7 [Dry Fingerprint]

The fingerprint images shown above are produced due to dry finger or due to insufficient applied pressure during fingerprint input. Apply stronger pressure or blow into the finger to produce good-quality fingerprint image. (Especially during winter)

Figure 8 [Fingerprint with Scar]

The above fingerprint images are produced due to scar or eczema in the finger. If these fingerprints are registered, authentication may be denied after scar or eczema is healed. Therefore, avoid such types of fingers and use other finger for fingerprint registration.

The following are three conditions that need to be satisfied to produce good-quality fingerprint during registration.

1. Core area of fingerprint image is located in the center of picture.
2. Fingerprint image fills the entire picture.
3. Ridge (black line) and valley line (white line) of fingerprint are expressed clearly.

■ False Rejection and False Access

Many problems can occur if fingerprint image quality is poor or fingerprint area without special characteristics is registered due to the non-central location of the core.

1) False rejection

This event represents a case when authentication trial for a registered fingerprint fails. If the condition of a registered fingerprint image is poor, even properly entered user fingerprint can be rejected for authentication. It should be noted that even if a fingerprint image is registered properly, an improperly entered fingerprint can still be rejected for authentication. Factors such as fingerprint input condition and fingerprint image quality affect the occurrence of this event.

2) False access

This event represents a case when another person's fingerprint is authenticated. In general, this event can occur frequently when a fingerprint with insufficient characteristics is registered due to missing core. It can also occur when fingerprint types are similar.

3) Authentication security level

This is a value set as criteria to determine authentication through matching between entered fingerprint and registered fingerprint. If authentication security level is lowered, false rejection rate decreases while false access rate increases. On the contrary, if authentication security level is raised, false rejection rate increases while false access rate decreases. For such reasons, each location with a fingerprint authentication system uses a suitable security level. The default security level setting can be used for general purpose fingerprint authentication systems.

1.5 Fingerprint Registration Procedures

These are procedures to register a fingerprint using the fingerprint recognition sensor with the Remote program.

1) This is the initial fingerprint registration window.

2) Select a finger whose fingerprint is to be registered.

To skip the initial window, uncheck the box.

3) Place the finger on the fingerprint recognition sensor

4) Briefly remove the finger from the fingerprint recognition sensor.

5) Place the finger on the fingerprint recognition sensor again

6) If fingerprint is entered properly, "OK!" is displayed to proceed to the next step.

7) Registered fingers are displayed in green. If fingerprint registration is completed, press **Next** button.

8) Fingerprint input was completed.

Press **Finish** button to finish fingerprint input.

※ The number of fingerprints can be changed at [\[Server Environment Setting\]](#).

2. Remote Manager Use Guide

2.1 Start Program

Only users registered as the administrator can use Remote Manager, as no registered administrator is available during the initial installation, logon is allowed as the master administrator.

To start Remote Manager program, double click icon on desktop.

- 1) Log in for a Master Manager: Click "Master Log Check Box", and enter the pass word. (Default value is "1".)
- 2) Log in for User having the administration authority: After entering the manager ID, enter password or authenticate with your finger.

Regarding to the password for the initial master manager, modify in [Main Menu] – [System] – [Change Master Password] in Menu which at the right side.

The screenshot shows a 'Change Master Password' dialog box. It has a title bar with a lock icon and a close button. The dialog contains three text input fields: 'Old Password', 'New Password', and 'Confirm Password'. At the bottom, there are two buttons: 'OK' and 'Cancel'.

2.2 Menu Configuration

2.2.1 Main Screen View

It is the screen that arranges a frequently used menu screen. When clicking the button, it moves to the screen that the user wants.

The button for TNA and Meal menu is activated when connecting with USB Lock.

But in case of less than 10 people in the foreign web site, TNA and Meal menu can be managed without USB Lock.

(USB Lock)

2.2.2 Monitoring

Authentication record status of a user authenticated by the fingerprint recognition terminal, access status of Remote manager and terminal connection status are monitored in real-time.

Server connection status: It displays the network connection status of the authentication server and data server. Periodically, check the status of the connection and attempt to connect when disconnecting.

(It displays green when connecting in normal, otherwise does red when in abnormal)

2.2.2.1 Access Log List

Access Log List of a user is displayed.

- Time: Access date and time are displayed.
- Terminal ID: ID of a terminal that authenticated is displayed.
- User ID: ID of an authenticated user is displayed.
- Name: Name of an authenticated user is displayed.
- Emp NO.: Employee Number of an authenticated user is displayed.
- Branch: The branch information for an authenticated user is displayed.
- Location: A User's current location can be checked. (Only applied when using Anti Pass back)
- Access Group: Access Group of an authenticated user is displayed.
- Class: Users and visitors
- Mode: It displays the authentication mode among general/F1/F2/F3/F4.
(ex . [Terminal Information]-Functional Separation Meal: Breakfast, Lunch, Dinner Show, etc., if A/T: Attend, Leave, Out, In Display, etc.)
- Type: From 1:N/1:1/fingerprint card/card/password, a type that authenticated is displayed.
- Result: Authentication result is displayed as success/failure.
- External Device: Check option for external device if it is not connected leave with blank.
- Pass Count: if person over then, excessive number of people will be displayed (Only by using Tail Gate)

2.2.2.2 Remote Manager

It displays the access status of a client (Remote Manager), who is connected with the server.

Remote Manager				
Client ID	Admin ID	IP Address	Version	
 0999	00000000 : Master Admin	192.168.1.32	CmdProcess	
 0002	00000000 : Master Admin	192.168.1.32	FaceServer	
 0003	00000000 : Master Admin	192.168.1.32	Standard v4.1.0.0	
 0005	00000000 : Master Admin	192.168.1.32	Standard v4.1.0.0	

- Client ID: ID of a client connected to the server is displayed.
- Admin ID: ID of an administrator who is using a client is displayed.
- IP address: IP of a client computer is displayed.
- Version: The version is displayed to a client connected to the server.

2.2.2.3 Status

Terminal connection status is displayed.

- Connection: If a terminal is connected,  green lamp is displayed.
- Disconnection: If a terminal is disconnected,  red lamp is displayed.

※ Client connection status and whether to use the terminal state can be set to [Tool]-[Environment Settings]-[Local Environment Setting].

※ Door Control

- Select the connected terminal, click the button of the mouse and then click the pop-up menu. After that, control the door.

- 1) Open Door: Release door unlock for a second.
 - 2) Door Unlock: Activate the door lock to the unlocked state.
 - 3) Door Lock: Activate the door lock to the locked state.
 - 4) Setup Options: When the terminal is connected, it checks the Setup Options and applies.
- (Reference: [Setup Options](#))

2.2.2.4 Event List

It displays the various event lists of the terminal.

Event List						
Time	Terminal ID	Terminal Name	Partition	Account	Class	Event
2016-05-03 14:55:59	6000	6000			Terminal State	Terminal Tamp
2016-05-03 14:55:58	6000	6000			Terminal State	Terminal Attach

- Time: It displays the time information for the event occurred.
- Terminal ID: Terminal ID is displayed.
- Name: Terminal name is displayed.
- Partition: It means the independent security zone that consists of many zones. (Only for MCP040) Partition number #01~04
- Account: The account number that set in 'Partition Setting' (Only for MCP040).

- Class: The class of the events is displayed. (open/close, Access Control, System Trouble, Alarm)
- Event: The type of the event is displayed.
- Qualifier: Alarm or Restoration
- ID: User number, Area code, 000-999 (System event is always 000.)

If the user number exceeds 999, the maximum value is less than 999. (Only for MCP040)

- Remark: The brief information for the authenticated user is displayed.

2.2.3 Terminal Management

Terminal addition/change/deletion & setting value change for each terminal can be made.

A terminal must be registered in advance for connection with the server.

- Add Terminal: Select [Add Terminal] in the [Terminal Management] menu.
- Modify Terminal: Double click a terminal to be changed at the terminal list window.
- Delete Terminal: After checking a terminal to be deleted at the terminal list window, select [Delete Terminal].

Remote Manager v4.0 [Admin Logon 00000000 : Master Admin] (CONNECT2)

Terminal

Add Terminal | Delete Terminal | Upgrade Firmware | Setup Options | Assign Admin/s | Download customized file

► Basic Information

- ID: Assign ID to a terminal.
- Name: Assign a name to a terminal.
- Branch: Select a branch registered at Branch Management.
- Install type: Enter the installation type of the terminal.
(Fixed: The terminal for General installation, Portable: The terminal with the power and back-up battery)
- Location: Enter a location where a terminal is installed.

- Other: Enter other items on a terminal.
- Reg. Date: Set the date and time of terminal registration.
- Door control: It gives the control authority for the terminal in the list.
 - 1) Allow all functions: Allow Door open/lock/unlock control available.
 - 2) Disabled: Not allow Door open/lock/unlock control (UI: Not indicated)
 - 3) Remote door open only: Allow only Door open control available.
- Type: The type of General, Controller, and Dummy reader is displayed.
 - 1) General: General Reader Terminal
 - 2) Controller: Controllers such as MCP040 etc.
 - 3) Dummy reader: Only terminal that passes the card number without the authentication as there is no process to authenticate.
- Time Zone: Standard time in the world to the information terminal Time Zone setting (world standard time-based time synchronization of the handset)

■ Terminal Function Assignment

- T/A: Check this if terminal function is Time/Attendance.
- Meal: Check this if terminal function is meal service management.
- School: Check this if terminal function is school management.

■ Anti Pass Back(※ See detailed setting an example: [\[ex1\)Anti Pass Back\]](#))

■ Enter Zone: Set a code registered at [\[Anti Pass Back Management\]](#)

■ Exit Zone: Set a code registered at [\[Anti Pass Back Management\]](#)

■ Soft Pass Back: Check whether Soft Pass Back is or not.

(Even if it has the limitation of the Pass Back, it processes the authentication success in the terminal or the server and it alarms the current status in the monitoring screen.)

■ Function Assignment

UNIS S/W can basically use one DVR and a license should be purchased to use multi DVR.

(To assign, [DVR Setting](#) should be registered in advance.)

- DVR ID: Select the DVR ID corresponding to the terminal.
- DVR IP: Enter the DVR IP address .

DVR Configuration

DVR ID	Not Defined ▼	DVR IP		CH1	Not Defined ▼	CH2	Not Defined ▼
--------	---------------	--------	--	-----	---------------	-----	---------------

- CH1: Select the Channel 1.
- CH2: Select the Channel 2.

■ Assign Terminal Administrator

A list of users with ☒ Terminal Management rights of ☒ Access Control at [\[Admin Authority Management \]](#) is displayed at "Unassigned Admin".

After selecting a user to be assigned as an administrator, move the selected user to "Assigned Admin" list with the  button.

: Designate a manager by moving the left to the right.

: Release a manager by moving the right to the left.

: Designate all the manager by moving the left to the right.

: Release all the manager by moving the right to the left.

2.2.3.2 Delete Terminal

[illegible]

After confirming to delete the terminal information, delete the registered device.

2.2.3.3 Upgrade Firmware

Terminal firmware can be upgraded.

Find the path which has the firmware file, choose that file and press **Open** button.

Select a terminal to be upgraded and press **Send** button to upgrade the firmware.

※ If operating a terminal during firmware upgrade, the firmware internal functions stop and the terminal cannot be used. Therefore, take caution during firmware upgrade.

2.2.3.4 Setup Options

When a terminal is connected, the terminal option setting is confirmed and applied.

■ Button

- Refresh: Brings back the setting value which is applied to the terminal.
- Apply: Apply the current setting value to the terminal.
- Apply to Another Terminal: Apply the current setting value to the other terminal.

For the MCP040, please refer to the Settings option MCP040.

► Basic

■ Authentication Level

- 1:1: It is the level value used during [1:1 authentication](#) recognition terminal.
- 1:N: It is the level value used during [1:N authentication](#) at the fingerprint recognition terminal.

■ Access Level

- Anti Pass Back: It is the anti pass back assigned value.(※ See detailed setting an example: [\[ex1\)Anti Pass Back\]](#))

- Not Use: Anti pass back is not set at a terminal.

- Access Allowed When server disconnected: Access allowed for all users in case of communication disconnection.

- Access Denied when server disconnected: Access prohibited for all users in case of communication disconnection.

- Authentication Restriction: User authentication method in devices that are limited to a fingerprint and password.

■ Others

- Sound Volume(0~20): Specifies the sound volume of the terminal (authentication notification sound) - AC1000 ~ AC6000: Volume value 0 ~ 5 / AC7000: Volume value 0-15

- User ID Length (2~8): Specifies The ID length of a user assigned in the terminal.

- User Key: The type of the number to be entered during 1:1 authentication is assigned; user ID or Unique ID. User ID is the default key used in the program and it can be up to an 8-digit number.

※. If a key over 9-digit is required, use Unique ID as key.

► Network Setting

- Automatic IP Address Acquisition: A terminal is set with dynamic IP.
- Following IP Address Used
 - Terminal IP: Terminal's fixed IP assigned to a terminal is displayed.
 - Subnet Mask: Terminal's subnet mask is displayed.
 - Default Gateway: Terminal's gateway is displayed.
 - Authentication Server IP: IP address of the authentication server to connect a terminal is displayed.
 - Authentication Server Port: Port of the authentication server to connect a terminal is displayed.
(basic port: 9870)
- **Authentication Mode: Terminal's authentication mode is displayed.**
 - NS: Authentication is made with the server first. In case that the terminal and server are disconnected, authentication is made with the terminal.

- SN: Authentication is made with the terminal first. In case an authenticated user is not available in the terminal, authentication is made with the server.
- NO: Authentication is made only with the server. If the terminal disconnects the server, the authentication cannot be authenticated.
- SO: Authentication is made only with the terminal.
- Operation Mode: It displays the operation mode; Access Control, TNA, Meal, Shift and People Count. (Shift and People count functions are only applied in the special terminal and firm ware.)
- The text for Meal Printer: Set the text to be printed to the Meal Printer which is connected in the terminal.
- Locking Setting

This function is used for opening/locking setting of an entrance/exit if a terminal is used at entrance/exit.

The screenshot displays the 'Setup Options' window with the 'Terminal Option Setting' tab selected. The terminal ID is '5000 : 5000'. The 'Lock' tab is active, showing time settings for 'Lock' (02:12~11:42) and 'Open' (12:04~24:00). A calendar view on the right shows the days of the week and holidays. The status bar at the bottom indicates 'Requested process has been proceeded.'

- Locking Terminal: It is used to restrict user access (authentication) by a terminal.
- Unlocking Terminal: It is used to leave a terminal open without authentication restriction.

■ Time Setting Procedures

1) Drag the left and right borders of that appears after clicking the mouse button in the slider (grid square) to adjust the time. Or, enter a time value directly by pressing the enter key to complete the setting. (Up to 3 is available.) The locking time and opening time cannot be duplicated.

2) Set the day of the week, click **Apply** button, and then it is applied on that day.

3) When clicking the right button of the mouse in the timeline (slider), the menu will pop up.

These are the values in timeline control and they are fixed in English, even when clicking the mouse right-click in the menu.

- Initialize: Initialize the set time.
- Show Value: Show the set time.
- Display: Modify the timeline value.

■ Holiday can be set and assigned as Holiday 1~3.

1) In case of applying lock/unlock setting only in Holidays (holidays, national holidays, etc.) and special holiday, Holiday 1, Holiday 2 and Holiday 3 schedule is registered in the menu.

2) Holidays must be registered and Add / Delete from the menu to add the date / apply, please.

► Holiday Setting

- 1) Select a number to set from the list and assign the holiday type.
- 2) Holiday type can be classified and assigned as holiday 1~3.
- 3) Select a date to be set as holiday and press **Registration** button to assign it as holiday.

※Up to 100 holiday registrations can be made. Two or more of the same date that the holiday will be designated as case number. (Sequential)

- Set alerts and let the siren sound every set time.
- 1) Retrieve: Bring back the Siren configuration information from the saved file (Alarm.dat) in the installation path.
 - 2) Save to File: Save the Siren information in the installation path. (Alarm.dat)
 - 3) Alarm Time: Set the time to start alarm.
 - 4) Settings: Select the periodic cycle (day).
 - 5) Duration: Set the time to sound alarm. (Unit: Second 0~15)
 - 6) Notes: Enter the note about alarm.
 - 7) Use the entered details with **Add / Modify / Delete** button to manage in the left list.

► Meal Time Setting

- When using the Meal Time Settings mode, designate the meal time in the server in case of using the meal time mode. (non-redundant)
- Breakfast, Lunch, Dinner, Snack, and Late Night Meal can be set.

► VoIP

The screenshot shows a software interface titled "Setup Options". At the top, there's a "Terminal Option Setting" header. Below it, a "Terminal" dropdown menu is set to "5000 : 5000". A horizontal menu bar contains several tabs: "Basic", "Network", "Lock", "Holiday", "Siren", "Meal Time Setting", and "VoIP" (which is highlighted in green). A "Configuration" dialog box is open on the left, titled "Account 1", with three input fields: "Address", "ID", and "Password". At the bottom of the main window, there are four buttons: "Refresh", "Apply", "Apply to Another Terminal", and "Close". Below these buttons, a status message reads "Requested process has been proceeded."

- Set the server access account of SIP for voIP or exchanger.

Address: Enter the server address of exchanger or SIP Server.

ID: Enter the server ID of exchanger or SIP Server.

Password: Enter the server password of exchanger or SIP Server.

2.2.3.5 Assign Admins

A terminal that can be managed by each administrator is assigned. A terminal administrator is a user who can use terminal menus. In case more than one administrator is registered in a terminal, the administrator authentication process is required to enter the setting menu.

After selecting an administrator, select a terminal to be registered from [Unassigned Terminal] list and press the  button to move it to **Assigned Terminal** list.

The user's list having the authority displays from

After designating the terminal administrator and sending the user from terminal, the designation is applied.

2.2.3.6 Download customized file

Download customized file is the function that a user can separately specify file and send it to the terminal. Defined Text File(.csv)/Backgroud image File(.jpg)/Success voice File(.wav)/Fail voice File(.wav)/Movie File(.mp4) Please refer to the terminal introduction for the defined file.

1. Defined Text File

After specifying a file as a Defined Text File (.csv) and selecting the CSV file (.csv), press **OK** button to display the selecting terminal window.

After selecting the terminal on terminal list window click **Send** and file is sent and the results of download appear.

CSV file is created after text which will change in excel file with firmware is changed to make csv file.

If changing back from the defined text to the default text, select **Application - Display - User Text** in the Terminal menu and clear the mark in the check box.

2. Modifying Background Image File

Designate the File type as the background image file(.jpg) and select the image file(.jpg).

Press **OK** button to display the terminal window. Select the terminal in the terminal list window. After that, press **Send** again and the file is transferred and the result of the download is displayed.

At this time the file name is applicable to file within only 15 words. and JPG file of 320* 240 can be sent. If data of other format is downloaded there is an "version error" in the result of download.

If, Background image File to change back to the default: **Application – Display** and choose to enter the menu.

3. Modifying the Voice File

When a file is specified with 'success voice file (.wav)', select Wav file (.wav) and click **OK** button to display the selecting terminal window.

Press **Send** button to transfer the file and display the downloaded result.

At this time, choose file name within 15 words including extension name, send Wav file of 8 KHz ,16 bit mono. If date other format is downloaded version error is displayed on the monitor.

In case of fail voice, change in the same way by designating file type as (.wav)

If changing back to the default voice from the defined voice, select **Operation method – Window setting** in the terminal and clear the mark in the check box.

To change back to the default in the Custom Voice Voice [operating system] from the terminal - [Screen Settings] to enter the menu to place a checkmark in the "Use your voice 'item unchecked.

4. Setting the Movie File

When a file is specified with movie file (.mp4), select the movie file (.mp4) and click **OK** button to display the selecting terminal window.

Press **Send** button in the terminal list to transfer the file and display the downloaded result.

At this time, use the file name within 15 words including the extension and only transfer MP4 file. If the data of another format is download, "version error" is displayed in the results.

2.2.4 User Management

It is a list of registered users.

- ▶ Add User: Select **Add User** in **User Management**.
- ▶ Modify User: Double click a user to be changed in the user list window.
- ▶ Delete User: After checking a user to be deleted in the user list, select **Delete User**.

C	ID	Name	Employee ID	Location	Branch	Department	Title	Authority	Access Group	Schedule	Pay Rate	Meal Code
☐	00000005	2	00000005	**** : Not Assigned	**** : Not Assigned	**** : Not Assigned	**** : Not Assigned	**** : User	**** : Not Assigned	**** : Not Assigned	**** : Not Assigned	**** : Not Assigned

- ID: User ID is displayed.
- Name: User name is displayed.
- Unique ID: User's Unique ID is displayed.
- Branch: User's affiliated business location is displayed.
- Department: User's affiliated department is displayed.
- Title: User's title in a company is displayed.
- Authority: User's administration authority is displayed.

- Access Group: User's access control group is displayed.
- T/A Code: User's time/attendance code is displayed.
- Meal Code: User's meal service code is displayed.
- Payroll Code: User's hourly wage code is displayed.
- The number of the fingerprints: The number of user's fingerprints is displayed.
- The number of the card: The number of the user's cards is displayed.
- The number of the face: The number of the user's faces is displayed.

If any authentication method is not registered, the user is displayed as the color which is designated in [Authentication type non-registered user record color] from [Environment] – [General].

► Pop-up menu

- Click the button of the mouse in the list.

- Refresh: Update the list information
- Set Columns: Set the item to print from the list
- Find: Select the item and option to find and search them.
- Save: Save the currently displayed list of users as CSV file.

2.2.4.1 Add User

The screenshot shows a 'User Registration' window with a title bar containing a minimize button, a maximize button, and a close button. The main content area has a dark header with the text 'Add employee's info' in green. Below this, the form is divided into several sections:

- Basic Information:** A vertical list of fields on the left side, including ID (text input with '3007'), Name (text input), Employee ID (text input with '3007'), Branch (dropdown menu showing '**** : Not Assigned'), Department (dropdown menu showing '**** : Not Assigned'), Title (dropdown menu showing '**** : Not Assigned'), Authority (dropdown menu showing '**** : User'), Access Group (dropdown menu showing '**** : Not Assigned'), Schedule (dropdown menu showing '**** : Not Assigned'), Meal Code (dropdown menu showing '**** : Not Assigned'), and Pay Rate (dropdown menu showing '**** : Not Assigned').
- Extended Information:** A section on the right side containing fields for Telephone, Email Address, Address, Other, Reg. Date (calendar icon and date '2016/05/24 11:25:09'), Location (dropdown menu showing '**** : Not Assigned'), User Message, and a checkbox for 'Message'.
- Picture Information:** A large rectangular area for a user picture, with 'Add' and 'Delete' buttons below it, and a 'Capture from Webcam' button at the bottom right.
- Authentication Type:** A section below the basic information with a 'Combination' dropdown menu set to 'OR'. Below this are six radio buttons: Fingerprint, FP-Card, Password, Card, Face, and MobileCard.
- Information Sections:** A series of horizontal bars at the bottom, each with a label: Fingerprint Information, Password Information, Card Information, Face Information, and MobileCard Information.

At the bottom right of the window, there are two buttons: 'Add' (blue) and 'Close' (grey).

► Basic information

- ID: Assign ID to a user. (MAX 8)
- Name: Enter user's name.
- Employee ID: Enter user's Employee ID (More than 9 digits are available [User Key])
- Branch: Assign the business location code registered at Branch Registration.
- Department: Assign the department code registered at Department Registration.
- Title: Assign position code registered at Title Registration.

■ Authority: Assign the administration authority code registered at Admin Authority Management.

■ Access Group: Assign access group code registered at Access Group Setting.

■ Schedule: Assign time/attendance code.

■ Meal Code: Assign meal service code

■ Pay Rate: Assign pay Rate.

► Extended information

■ Telephone: Enter telephone number.

■ Email Address: Enter email address.

■ Address: Enter the address of user's residence.

■ Other: Enter other items.

■ Reg. Date: User registration date and time are automatically entered.

■ Location: Display the area where the user is currently located when using Anti Pass Back function.

(※ [\[Anti Pass Back Management\]](#), [\[ex1\)Anti Pass Back\]](#))

■ User Message: Enter the user message to display in the terminal when authenticating. (※ **Display ID when its authorized with user information from the computer, only with AC2100**)

■ Notice: When authenticating a user, enter the notice to display in the terminal.

(After entering the notice, if the employee authenticates the check setting, the notice is sent to terminal. Only 5000 and 6000 terminals are supported.

■ Picture Registration: Click **Add** button to register the photo a user wants. (Recommended Size: 320 x* 240). The registered picture size is limited to less than 7Kbytes. If a user is connecting a USB camera button to enter the real-time video, pictures can be obtained.

► Setting the Restriction

■ Access Date Range

- No Restriction Period: Allow a user's access at all times.
- Access Allowed Period: Set a user's access period.
- Restriction Period: Set a user's access restriction period.

(※ **If it is the terminal period of limitations, a user cannot access with "invalid entry the term".**)

■ Exemption antipassback: Check a user's anti-pass back option.

- Setting the limitation for administration authority: In case of log in as a master administrator, it provides access data range to the user having the management authority.

As it is shown above, a master administrator selects the access list to give the authority. If the administrator who gets the authority from the master logs in again, he only can select the access group that the master gives authority to.

► Remote Access Password Information

- Remote Access not available: Even if a user is registered as the administrator, the user can't log in UNIS.
- Initialization: Initialize the password as the designated value in the environment setting.

*The maximum digits of the password are 30.

► Other information

■ ACU Partition: If a user is the partition which is connected with MCP040, only checked partition is allowed to access.

■ VOIP: It sets Voip account information.

► Authentication Method

- Combine the authentication methods such as fingerprint, fingerprint card, password, card, face, mobile card, and etc.

- In case of the fingerprint card, others cannot be used.

- If a user uses the password, the OR combination with others is available for only 2 methods.

- Except for that, the maximum 3 authentication methods are available.

■ Registration level: Set the available standard value when registering the fingerprint.

■ Authentication level: Set the available standard value when authenticating the fingerprint.

■ Fingerprint registration: Through the wizard, a user can register the fingerprint or delete it.

- **Delete:** Delete all the registered fingerprints.
- **Duress fingerprint:** If a user is threatened by somebody in outbreak situation, in case of registering your fingerprints, the user can get the alerts and mail from real-time log using your duress fingerprint.

- **1:N:** This is a method that authenticates fingerprint. A user can set 1:1 or 1:N. (1:N is the method that can be authenticated without entering ID when authenticating the fingerprint.)
- **Alarm setting for Duress finger**

Select the Duress alarm in [Environment] – [Local Environment] – [Alarm Popup]

as it is shown below.

■ Mail Setting for Duress fingerprint

Select the duress fingerprint in [Tool] – [Environment] – [Mail Environment]

- Terminal Password Information (Password registration): Register the password as your authentication method.
- Card information (Card registration): Press Card Reader button and let the card read in the smart fingerprint reader. After the card number appears, press **Add** button and register the card.
- Face information
 - 1:N Face: When authenticating with your face, it is available to do Face Authentication directly without entering ID or pressing the function key. (Now, only terminal authentication is available)
 - Register: Register a user's face with the terminal AC7000 (Data is saved in the server.)
 - 1) Press **Register** button to start to register a user's face.
 - 2) Select the terminal to register in the list and press **Start** button to keep processing.

- 3) Select the registration method in the terminal AC7000.
- General registration: 15° (Up), 8° (Up), 0° (Front), -5° (Below), -15(Below), a total of five registration of face angles.
 - Simple registration: 15° (Up), 0° (Front), -15(Below), a total of three registration of face angles.

4) Press **Start** button, show your face in the screen and register in each steps according to the guide.

5) After completing the face registration, press **Finish** button and finish registration.

- Add Face Registration: Press **Add** button to register additionally. (It only activates when the face data is registered in advance.)
- Delete Face Registration: Press **Delete** button to delete the registered data of face information.

■ Mobile Card Information

- To use the mobile card, a user should register the administrator first.
(Refer [Mobile Card Administrator Setting](#))

The screenshot shows the 'MobileCard Information' form with the following fields and controls:

- Period Setting:** Two date pickers showing '2016-05-03' and '2017-05-03' separated by a tilde (~).
- Country Code:** A text input field containing '82'.
- Mobile Number:** A text input field containing '01012341234'.
- Immediately issued when the register:** A radio button that is currently selected (blue).
- Discard:** A purple button.

- **Period Setting:** Set the period of mobile card access. (Up to 1 year from the current time)
- **Country Code:** Country code for the international phone call.
- **Mobile number:** A User's mobile number
- **Immediately issued when the register:** After checking the corresponding menu, if the mobile card is not issued, it transfers the mobile card sending message in SMS when adding or deleting the user.
- **Discard:** Discard the issued mobile card.

**** If a user wants to check whether mobile card is issued or not, double click the corresponding user in the list and the user can find it.
In case of the user whose mobile card has already been issued, the window in Mobile Card Information is deactivated.**

The screenshot shows the 'MobileCard Information' form in a deactivated state. The fields and controls are:

- Period Setting:** Two date pickers showing '2016-05-24' and '2017-05-24' separated by a tilde (~).
- Country Code:** An empty text input field.
- Mobile Number:** An empty text input field.
- Immediately issued when the register:** A radio button that is now unchecked (green) and has a green checkmark icon to its left.
- Discard:** A purple button.

After selecting a terminal to receive information, Press **Send** button.

※ After entering the terminal's ID or name to transfer, press **F3** or **Search** button to search the corresponding terminal.

※ **When transferring the user's name from the terminal, a maximum 16 bytes only can be transferred.**

※ Check the terminal to transfer after checking all the employees - For the employees who have no **Right to Access ([Access Control])**, its transmission is automatically skipped.

※ Visitor is not transmitted to the terminal.(See [\[Add Visitor\]](#))

2.2.4.4 Terminal User Management

User information stored in a terminal can be inquired or loaded to the server.

User information stored in a terminal does not include the user's name.

Information of a user who is already registered in the server cannot be loaded.

(But a user can bring the corresponding user in [Tool]-[Environment]-[Server Environment]-
Check [All terminal to overwrite users])

- **Recall:** Recall the user information stored in a terminal.
- **Delete:** Delete a checked user from a terminal.
- **Delete All** Delete all the users from the terminal.
- **Retrieve:** Bring the imported user information back to the server.
- **Close:** Close the current window.

2.2.4.5 Mobile Card Issue Management

2.2.4.5.1 Mobile Card Batch Apply

The screenshot shows a web application window titled "MobileCard Issue Management". Inside, there's a dark header bar with the text "Manage mobilecard issuance. Search batch user issuance or history of issuance". Below this, there are two tabs: "MobileCard Batch Apply" (which is active and highlighted in green) and "MobileCard Issue History". Under the active tab, there's a "Condition" section with two radio buttons: "Within 1 months" (selected) and "UnIssued User". To the right of these is a "Search" button. Further right is a date/time picker showing "2016-05-03 18:05" and a dropdown arrow, followed by a tilde symbol and the text "A year later". To the right of this is an "Apply" button. Below the "Condition" section is a table with the following columns: "C", "ID", "Name", "Employee ID", "Country Code", "Telephone", "Period", and "Status". The table body is currently empty.

It searches the users whose mobile card expiration date is less than a month or mobile card is not issued yet and issues the mobile card for them.

- **Search:** Select a target to search.
- **Apply:** Click **Apply** button, and issue the mobile card at once for the inquired user.

2.2.4.5.2 Mobile Card Issue History

The screenshot shows a web application window titled "MobileCard Issue Management". Inside, there's a dark header bar with the text "Manage mobilecard issuance. Search batch user issuance or history of issuance". Below this, there are two tabs: "MobileCard Batch Apply" and "MobileCard Issue History", with the latter being selected. Under the "MobileCard Issue History" tab, there's a section labeled "Condition" with two input fields: "Mobile Number" and "Name". To the right of these fields are two buttons: "Search" and "History Search". Below the search section is a table with the following columns: ID, Name, Mobile Number, Date, Admin, and Status. The table is currently empty.

ID	Name	Mobile Number	Date	Admin	Status
----	------	---------------	------	-------	--------

It searches the issue history of the mobile card.

2.2.5 Visitor Management

It is a list of registered visitors.

- Add Visitor: Select [Add Visitor] from [Visitor]. Visitor ID is distinguished from User ID.
- Delete Visitor: After checking a visitor to be deleted from the visitor list window, select [Delete Visitor].

Remote Manager v4.0 [Admin Logon 00000000 : Master Admin] (CONNECT:2)

Visitor

C	ID	Name	Social Number	Location	Visitor's Company	Visitor Information	Access Group	Host Branch	Host Department
■	00000002	visitor1	00000002	**** : Not Assigned			**** : Not Assigned	**** : Not Assigned	**** : Not Assigned
■	00000003	visitor2	00000003	**** : Not Assigned			**** : Not Assigned	**** : Not Assigned	**** : Not Assigned

- Click the right button of the mouse in the list.

- Refresh: Update the list information.
- Set Columns: Set the item to print from the list.
- Find: Select the item and option to find and search them.
- Save: Save the visitor's list as CSV file.

2.2.5.1 Add Visitor

The screenshot shows a 'Visitor Registration' window with a title bar and a close button. The main area is titled 'Add visitors info' in green text. The form is divided into several sections:

- Basic Information:** Fields for ID (00000006), Name, Social Number (00000006), Visitor's Company, Visitor Information, Telephone, Email Address, Address, Other, Reg. Date (24 May 2016), and Location (**** : Not Assigned).
- Authentication Type:** A dropdown menu set to 'OR' and four radio buttons for Fingerprint, Password, Card, and MobileCard.
- Visiting Information:** Fields for Host Branch (**** : Not Assigned), Host Department (**** : Not Assigned), Host, Purpose for Visit, Access Group (**** : Not Assigned), and Visit Period (2016/05/24 - 2016/05/24).
- Picture Information:** A section with an 'Add' button, a 'Delete' button, and a 'Capture from Webcam' button.

Below the main form is a 'Visitor Lookup' section with four tabs: Fingerprint Information, Password Information, Card Information, and MobileCard Information. At the bottom right are 'Register' and 'Close' buttons.

■ Basic information

- ID: Assign visitor's ID.
- Name: Enter visitor's name.
- Social Number: Enter visitor's social number.
(But Serial number should be the only value in users and visitors.)
- Visitor's Company: Enter visitor's company.
- Visitor Information: Enter visitor's information.
- Telephone: Enter visitor's telephone number.
- Email Address: Enter visitor's email address.
- Address: Enter visitor's mailing address.

- Other: Enter other required items.
- Reg. Date: Visitor's registration date and hour are entered automatically.
- Location: a visitor tells the current position information.(※[\[Anti Pass Back Management\]](#),[\[ex1\)Anti Pass Back\]](#))

■ Authentication Type

- Combine the authentication methods such as fingerprint, fingerprint card, password, card, face, mobile card, and etc.
- In case of the fingerprint card, others cannot be used.
- If using the password, the OR combination with others is available for only 2 methods.
- Except for that, the maximum 3 authentication methods are available.

■ Visiting information

- Host Branch: Assign a business location registered at [Branch Registration].
- Host Department: Assign a department registered at [Department Registration].
- Host: Enter visitor's visiting person.
- Purpose for Visit: Enter visitor's visit purpose.
- Access Group: Assign an access group registered at [Access Group Registration].
- Visit Period: Assign visitor's visit period. Visit is allowed only during the assigned period.

■ Fingerprint Information: Press the button to register the fingerprint.

Refer to [\[Fingerprint Registration Procedures\]](#) for more information on fingerprint registration procedures.

- 1:N Authentication Permission: Authentication is made only with fingerprint without fingerprint recognition terminal keypad input.

■ Password Information: Register a password to be used for authentication.

- Card Information: Press **Reading** button to read a card in the smart fingerprint reader. After the card number appears, press **Add** button to register a card.

■ Picture Registration: Press **Add** button to register the desired picture.

(Recommended Size: 320 x* 240) The picture size to be able to is limited to less than a 7Kbytes. If a user is connecting a USB camera button, press the real-time video button to gain the picture.

- **Visit Finish:** Delete the visitor in the list and add him to the visitor's history.
- **Visitor Lookup:** Press **Visit Finish** button to search the deleted visitor's list from the list.

※ Visitor information cannot be transmitted to the terminal, and **only Authentication server is available.**

Name	Social Number	Last Visit Date	Visitor's Company	Visitor Information
------	---------------	-----------------	-------------------	---------------------

- **Select:** Display the selected visitor in the visitor's information. (The applied item reflects only the corresponding column.
- **Delete:** Delete the selected visitor.

The screenshot shows a software interface for managing visitor information. The main window is titled "Modify Visitor's Information" and contains several sections for data entry:

- Basic Information:** Fields for ID (00000002), Name (visitor1), Social Number (00000002), Visitor's Company, Visitor Information, Telephone, Email Address, Address, Other, Reg. Date (24 May 20), and Location (**** : Not Assigned).
- Authentication Type:** A dropdown menu set to "OR" and four radio buttons: Fingerprint, Password (selected), Card, and MobileCard.
- Visiting Information:** Fields for Host Branch (**** : Not Assigned), Host Department (**** : Not Assigned), and Host.
- Picture Information:** Includes "Add", "Delete", and "Capture from Webcam" buttons.

A modal dialog box titled "Remote Manager" is overlaid on the form, asking "Confirm - Blacklist User?". It has "Yes" and "No" buttons.

Below the main form, there are sections for "Fingerprint Information", "Password Information" (with "Input Password" and "Confirm Password" fields), "Card Information", and "MobileCard Information". At the bottom of the window are buttons for "Visit Finish", "Change blacklist", "Modify", and "Close".

- Delete Blacklist: Press **Remove from Blacklist** button to delete the blacklist.
(It is available to modify the information of access group.)

■ Confirm Authentication Log

- Blacklist following an authentication result before registering as "success" normal access is possible, but once registered as authentication failures "blacklist attempts authentication" to display the results.

Authentication Log List

Time	Terminal	User ID	Name	Emp No.	Branch	Location	Access Group	Class	Mode
2016-05-03 18:32:22	6000 : AC6000	0231	User		**** : Not A...	**** : Not A...	**** : Not A...	User	Access
2016-05-03 18:31:19	5000 : AC5000	0231	User		**** : Not A...	**** : Not A...	**** : Not A...	User	Access

■ Additional notification function: mail service, an alarm message display

- Check the use of mail service and [Blacklisted User Attempted Authentication] from [Tool] – [Environment] – [Mail Environment] to forward the related contents into the mail as below.

Select mail

☐ Terminal Disconnected	☐ External Sensor
☐ Terminal Tamper	☒ Blacklisted User Attempted Authentication
☐ Door Forced	☐ Matching Fail
☐ Door Not Closed	☐ Duress
☐ Lock Error	
☐ Emergency State	

- Check [Blacklisted User Attempted Authentication] in [Tool] – [Environment] – [Alarm popup] – [Select popup alarm] to display the alarm window in the monitoring screen as below.

2.2.6.1 Delete Blacklisted User

[illegible]

Delete the selected user in the blacklist. All the information of the deleted user is deleted.

2.2.6.2 Blacklist Download

Transfer the selected blacklist user to the terminal.

2.2.7 Access Control

An administrator uses the access control function to restrict user's access by a date of the week.

Time Zone, Access Hour, Access Area and Access Group that are lower functions of Access Control are configured as tab to show their setting values.

To set the Access Control, use [Wizard] function or Set [Time Zone][Access Time][Access Area][Access Group] directly.

2.2.7.1 How to use Wizard

- 1) Select [Wizard] menu at the top of right side like below.

- 2) Select the Access Terminal in the list. The selected terminal is included in the finalized access group.

A screenshot of the 'Access Wizard' dialog box. The wizard has five steps: STEP 1 (Select Terminal), STEP 2 (Time Zone), STEP 3 (Access Time), STEP 4 (Access Group), and STEP 5 (Finish). STEP 1 is currently active. Below the steps, there's a section titled 'Select Access Terminal' with the instruction: 'Select accessible terminal. Selected terminal will be included in the final access group to be created'. Below this is a table with columns: C, ID, Name, and Access Area. The table contains five rows of data, with the third row (ID 5000, Name 5000) selected. At the bottom of the dialog, there are 'Prev', 'Next', and 'Cancel' buttons.

C	ID	Name	Access Area
☐	0001	5000	
☐	0002	7000	
☒	5000	5000	
☐	6000	6000	
☐	7000	7000	

- 3) Select the time zone. (Default is selected basically.)

- Set access group to terminal: Transfer the access group to the terminal after finishing [Wizard].
- Set access group to user: Set the access group after finishing [Wizard].

2.2.7.2 How to register manually

2.2.7.2.1 Add Time Zone

The Maximum possible 12 times zone to access per day can be set according to codes.

Registration Procedures

- 1) Enter a desired code number (fixed 4-digit) and name.

- 2) Set the authentication method to use if needed. (If not, it activates in the authentication method that is set previously in the user information.)

- 3) Check the time zone to use and enter the time range value.

If a time zone is assigned, the precise time of the time zone is displayed at Time Zone Setting.

2.2.7.3 Add Access Time

Access time for weekday and holiday is set according to codes. The set value will be applied when setting the access group.

Add Access Time

Set access time for weekdays and holidays per code. Set value will be applied when setting access group

Code: Name:

Set Weekday

		3	6	9	12	15	18	21	24
Sunday	0000 : Default	[Blue bar with markers]							
Monday	0000 : Default	[Blue bar with markers]							
Tuesday	0000 : Default	[Blue bar with markers]							
Wednesday	0000 : Default	[Blue bar with markers]							
Thursday	0000 : Default	[Blue bar with markers]							
Friday	0000 : Default	[Blue bar with markers]							
Saturday	0000 : Default	[Blue bar with markers]							

Set Holiday

Holiday Group	**** : Not Assigned	[Blue bar]																						
Holiday	0000 : Default	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23

After entering the desired code and name, set a time zone code set at [\[Add Time Zone\]](#) according to dates of the week and holidays. Holiday setting [\[Holiday Management\]](#) code is registered in the holidays.

※ See detailed setting an example: [\[ex1\)Access Control\]](#)

2.2.7.4 Add Access Area

A terminal that allows access according to codes is set. The setting value is used for access group setting.

Add Access Area

set accessible terminal per code. Set value will be applied when setting access group

Code: Name:

Access Time

Door 1:

Door 2:

Door 3:

Door 4:

Add Terminal

C	ID	Name	Access Area
☐	0001	5000	
☐	0002	7000	
☒	5000	5000	W001:;
☐	6000	6000	
☐	7000	7000	

Enter the desired code and name, select the access time to be used in the access area and select the terminal available.

3. In case of deleting the Access Area

4. In case of deleting the Access Group

2.2.7.7 Transfer to Terminal

After setting access authority, it transfers to the terminal.

After selecting a terminal to transfer, press **Send** button.

2.2.8 Position Shaping (E_Map)

Terminal state can be monitored in real-time from a registered drawing position.

In order to do this, the position of all terminals along with the drawings must be designated.

Only JPEG, BMP, PNG file can be registered in position shaping.

Time	Terminal ID	Terminal Name	Map Code	Image Name	Partition	Account	Class	Event	Qualifier	ID	Remark
2016-05-03 14:55:59	6000	6000					Terminal ...	Terminal ...			
2016-05-03 14:55:58	6000	6000					Terminal ...	Terminal ...			

When a user double-clicks the terminal event list, it moves the map that the corresponding terminal exists in.

Time	Terminal ID	Terminal Name	Map Code	Image Name	Partition	Account	Class	Event	Qualifier	ID	Remark
2016-05-03 15:36:09	6000	6000	0002	map2			Terminal ...	Terminal ...			
2016-05-03 15:36:06	6000	6000	0002	map2			Terminal ...	Terminal ...			
2016-05-03 14:55:59	6000	6000					Terminal ...	Terminal ...			
2016-05-03 14:55:58	6000	6000					Terminal ...	Terminal ...			

2.2.8.1 How to set Positioning Shaping

2.2.8.1.1 How to use Wizard

- 1) Click **Wizard** at the top menu.

- 2) Select the image of the entire layout.

- 3) Press **Register** button to select the layout image to use in the area and place the terminal. To place the terminal in the layout, drag the corresponding terminal in the left into the layout with your mouse.

- 4)** Drag each drawing position in the list to place in an entire layout.

5) Press **Finish** button to finish setting.

2.2.8.1.2 How to register manually

2.2.8.1.2.1 Set Terminal Layout

Click on **Set Terminal Position** at the top menu. Then, the above screen appears, click **Select Image** to select the background drawing to select a background image.

If needing to move the location, click the corresponding terminal with your mouse to place the proper location. When a user double-clicks the terminal icon, check the detailed registration information.

2.2.8.1.2.2 Set Global Layout

If the position of each drawing is designated at the entire drawing, the position of a drawing can be viewed at a glance during monitoring.

Drawing position designation can be registered only for a drawing with a designated terminal position.

After selecting a background image by clicking on the image button, continue with the work being done.

Select a drawing to be placed by performing a right mouse click on the entire drawing. To change the position of an item, move it while clicking down on it.

If an item is double-clicked, the information of the corresponding item is displayed. When drawing position designation is completed, press **Save** button in order to save it.

The following are the descriptions on the signals displayed on a terminal.

-  : It marks the status of disconnected network. (It marks caution on screen.)
-  : It marks the cover opening of terminal. (It marks caution on screen.)
-  : It marks the fire detection of terminal. (It marks caution on screen.)
-  : It marks the panic detection of terminal. (It marks caution on screen.)
-  : It marks the crisis detection of terminal. (It marks caution on screen.)
-  : It marks the abnormal door opening. (It marks caution on screen.)
-  : It marks the prevention of door opening. (It marks caution on screen.)
-  : It marks the Lock error. (It marks caution on screen.)
-  : It marks the lock of terminal. (It marks notice on screen.)
-  : It marks the status of the designated external signal. (It marks notice on screen.)
-  : The status for unlock of terminal (It marks notice on screen.)
-  : It marks that the door is closed which is connected to the terminal. (It marks normal on screen.)
-  : It marks that the door is opened which is connected to the terminal. (It marks normal on screen.)
-  : It marks the status of normal condition of terminal. (It marks normal on screen.)

The following are the descriptions on the signals displayed on a terminal.

-  : Represents warning state
-  : Represents notice state
-  : Represents normal state.

The priority of signals displayed at a drawing is determined in the order of warning>notice>normal. If at least one terminal becomes the state of priority depending on the state of terminals that belonged to a drawing, the drawing signal is then changed.

2.2.9 TNA Settings

The menu will include TNA settings, Set Special shift

The screenshot shows the 'TNA Settings' application window. The title bar reads 'Remote Manager v4.0 [Admin Logon: 00000000 : Master Admin] (CONNECT:3)'. The menu bar includes 'TNA Settings', 'Set Special Shift', 'TNA Management', 'TNA Reports', 'Break Reports', 'Summary Management', and 'Transfer Work Result'. The main area displays a calendar for May 2016. Each day's cell contains three rows of data: 'Attend', 'Absent', and 'Late', each with a corresponding numerical value (e.g., 0, 0, 0).

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
01 Attend: 0 Absent: 0 Late: 0	02 Attend: 0 Absent: 0 Late: 0	03 Attend: 0 Absent: 0 Late: 0	04 Attend: 0 Absent: 0 Late: 0	05 Attend: 0 Absent: 0 Late: 0	06 Attend: 0 Absent: 0 Late: 0	07 Attend: 0 Absent: 0 Late: 0
08 Attend: 0 Absent: 0 Late: 0	09 Attend: 0 Absent: 0 Late: 0	10 Attend: 0 Absent: 0 Late: 0	11 Attend: 0 Absent: 0 Late: 0	12 Attend: 0 Absent: 0 Late: 0	13 Attend: 0 Absent: 0 Late: 0	14 Attend: 0 Absent: 0 Late: 0
15 Attend: 0 Absent: 0 Late: 0	16 Attend: 0 Absent: 0 Late: 0	17 Attend: 0 Absent: 0 Late: 0	18 Attend: 0 Absent: 0 Late: 0	19 Attend: 0 Absent: 0 Late: 0	20 Attend: 0 Absent: 0 Late: 0	21 Attend: 0 Absent: 0 Late: 0
22 Attend: 0 Absent: 0 Late: 0	23 Attend: 0 Absent: 0 Late: 0	24 Attend: 0 Absent: 0 Late: 0	25 Attend: 0 Absent: 0 Late: 0	26 Attend: 0 Absent: 0 Late: 0	27 Attend: 0 Absent: 0 Late: 0	28 Attend: 0 Absent: 0 Late: 0
29 Attend: 0 Absent: 0 Late: 0	30 Attend: 0 Absent: 0 Late: 0	31 Attend: 0 Absent: 0 Late: 0				

- **Set Special Shift:** A user can easily change the settings through the applicable menu if the user needs to assign special work separately from the work schedule registered in Work Mode Registration menu.
- **Process Transaction:** Time & attendance is calculated and applied based on the value registered in Time & Attendance Setup.
- **Modify Hours:** In the event there is any change in the result after processing the employee's time & attendance, a user can manually input-modify the value by double-clicking the applicable time in the menu.
- **Output Period Result:** Search the result of time & attendance processing for period. A user can save in file and print the inquired data.
- **Output Person Result:** Search the result of time & attendance processing for personal. A user can save in file and print the inquired data.
- **Attendance Reports:** Inquire the working status by query options. A user can inquire the list of tardiness, early leave, absence respectively, and print or save them in a file.

- ▶ Break Reports: A user can inquire the hours excluded from basic work hours due to going out or early leave out of the time & attendance processed.
- ▶ Process Totals: A user can count the result of daily time & attendance processed within a certain period.
- ▶ Modify Total Hours: In the event there is any change in the employee after the completion of time & attendance count, a user can manually input-modify the value by double-clicking the applicable time.
- ▶ Output Period Summary: Search the result of total hours for period. A user can save in file and print the inquired data.
- ▶ Output Person Summary: Search the result of total hours for personal. A user can save in file and print the inquired data.
- ▶ Transmit Work Result to another DB: All the time and attendance results can be transferred to a separate external DB.

(※ For more information on setting method, refer to: [\[ex5\)TNA Settings\]](#))

2.2.9.1 TNA Settings

Place the mouse in TNA Settings menu to show the submenu.

2.2.9.1.1 How to use Wizard

1) Set the standard business hours

The screenshot shows the 'Work Wizard' application window. At the top, a progress bar indicates five steps: STEP 1 (Set default, highlighted in green), STEP 2 (Set Shift Times), STEP 3 (Enter Information), STEP 4 (Set Schedule), and STEP 5 (Finish). Below the progress bar, a list of tasks is shown: 'Select Access Terminal' and 'Set standard business hours'. The main area of the wizard is divided into two columns. The left column is titled 'Arrival Time' and features a digital clock display showing '09:00'. The right column is titled 'Departure Time' and features a digital clock display showing '18:00'. Below these displays, there are three small icons: a plus sign, a minus sign, and a star. To the right of these icons is the text '-Yesterday *Today +Overnight'. At the bottom of the window, there are three buttons: 'Prev', 'Next', and 'Cancel'.

Enter the arrival time and departure time.

2) Set hours that do not fall in standard business hours

The screenshot shows a 'Work Wizard' window with five steps: STEP 1 (Set default), STEP 2 (Set Shift Times), STEP 3 (Enter Information), STEP 4 (Set Schedule), and STEP 5 (Finish). STEP 2 is the active step. Below the step indicators, the title 'Set Shift Times' is followed by the instruction 'Set hours that do not fall in standard business hours'. The main content area is divided into three columns: 'Set Working Time', 'Start time', and 'End time'. Under 'Set Working Time', there are four checkboxes: 'Time Before Shift', 'Overtime1 Hours', 'Overtime2 Hours', and 'Off Day Hours'. Each checkbox is followed by a time input field in the 'Start time' and 'End time' columns. All time fields are currently set to '00:00'. At the bottom of the window, there are three buttons: 'Prev', 'Next', and 'Cancel'.

Set Working Time	Start time	End time
☐ Time Before Shift	00:00	00:00
☐ Overtime1 Hours	00:00	00:00
☐ Overtime2 Hours	00:00	00:00
☐ Off Day Hours	00:00	00:00

Set the time if the over time exists. Check the check box to work and set the start time and end time. If the time passes 24 hours, select "eve, Today, next" before the time.

3) Enter information

► Enter Information

- Code: As a unique code number, it must be entered as a 2-digit number or alphabetic letters but not to be overlapped. (Special symbols are prohibited.)
- Name: Enter the unique name of work time.

► Basic Clocking config

- Clocking Mode
 - Use all function keys: Recognize all the records searched as time

- & attendance record from [Log]-[Log Management]-[[Access Log](#)].
 - Use attend and leave keys: Recognize first and last log of the arrival and depart logs searched from [Log]-[Log Management]-[[Access Log](#)].
 - Time Frame: The record of sign in/out within the relevant zone is processed as time & attendance.
 - any range other than 24 hours can be assigned (When one works longer than a day and time for leaving work is beyond 24 hours, treat it by simply adjusting the zone)
 - If the time is over the 24 hours range, a user should delete the `` blank before the time when entering the symbol.
 - For example) [00:00] ~ [00:00] => [05:00] ~ [+04:00]
 - Ignore if Absent (Only for Holiday): It does not treat as absence although one is absent on a certain day. (That is, it is applied to holiday, vacation, etc.)
 - Late IN Time/Early OUT Time: Tardiness and early leave are calculated based on the input time.
 - Multiple Daily Shifts: Apply in case the number of sign in/out during the day exceeds 1. For example, it can be set up when summing the Work hours by calculating from each sign in/out within the range of morning shift/afternoon shift work divided into morning shift - break - afternoon shift. Divided into a maximum of 4 zones (8 sub divisions) .
- (※ For more information on setting method, refer to: [\[ex5\)TNA Settings\]](#))
- **Advanced Settings:** A user can additionally set automatic creation of sign in/out, exclusion of going out/early leave, fixed time excluded (lunch time, etc.), and multiple sign in/out zones.

Advanced Settings

When setting business hours, create arrival/departure time automatically, set times that do not have to be on records, set multiple arrival/departure time periods

Time Frame 09:00 ~ 10:00

Auto Clock

- ☒ Auto Clock IN 00:00
- ☒ Auto Clock OUT 00:00

Out of Office Settings

- ☒ Deduct Break Time Clocking Mode Use all function keys
- ☒ Break by LEAVE record Clocking Mode Use all function keys

Break Times

- ☒ 1st Break 00:00 ~ 00:00
- ☒ 2nd Break 00:00 ~ 00:00
- ☒ 3rd Break 00:00 ~ 00:00
- ☒ 4th Break 00:00 ~ 00:00
- ☒ 5th Break 00:00 ~ 00:00

Set Multi Daily Shift Times

- ☒ 1st Band 00:00 ~ 00:00
- ☒ 2nd Band 00:00 ~ 00:00
- ☒ 3rd Band 00:00 ~ 00:00
- ☒ 4th Band 00:00 ~ 00:00

Set **Cancel**

■ **Time Frame:** Process the record of sign in/out within the applicable zone as time & attendance.

- Assignment of the range other than 24 hours is available (In the event work hours do not exist within 24 hours due to work that exceeds 1 day, it can be processed with real time by adjusting the processing zone)

■ **Auto Clock:** Sign in/out can be automatically recognized when there is no sign in/out time.

- (For example, if a user arrives after 10:00, the lateness time is not calculated. The arrival time should be admitted as 10:00.)

- **Auto Clock IN:** Applicable input time can be automatically recognized as sign-in time when there is no sign-in record.

-For example, if the setting time is 10:00, the arriving reports after 10:00 are neglected and it is considered to arrive at 10:00.

- **Auto Clock OUT:** Applicable input time can be automatically recognized as sign-out time when there is no sign-out record.

-For example, if the setting time is 15:00, the leaving reports before 15:00 are neglected and it is considered to leave at 15:00.

■ **Out of Office Settings:** Set in case the network hours except vacant time out of work hours should be calculated

- **Deduct Break Time:** Check if a user wants to exclude the leave-time.

- Clocking Mode:

Use all function key – Calculate in all logs regardless of the authentication mode.

Use attend and leave keys – Calculate the authenticated logs according to leave and return mode.

- Break by LEAVE record: Check if a user wants to exclude the leave- time in the middle of the working time because of outside work.

- Clocking Mode:

Use all function key - Calculate in all logs regardless of the authentication mode.

Use attend and leave keys – Calculate the authenticated logs according to IN/OUT mode.

- Break Times: Set in case there is fixed exceptional times such as lunch time, tea break, etc.

- Exceptional 1~5: Configurable up to five zones

- Set Multi Daily Shift Times: Apply in case there occurs sign in/out at least two times a day, that is, work schedule is divided into morning shift work-break-afternoon shift work. Each sign in/out time is summed up within the range of morning/afternoon shift works.

Maximum of 4 zones (8 sub divisions) available.

(※ **For more information on setting method: [ex5\)TNA Settings](#))**

- Zones 1~4: Set and assign the time in the zone wider than the range of **Work Hours Registration so that the authenticated record of sign in/out within the zone can be recognized as time & attendance.** Before setting, refer to [ex5\)TNA Settings](#)

- **Set:** Save the settings.

- **Cancel:** Close the data without saving them.

- Set Shift Times: According to the option, it is divided as 5 types.

- Pay Rate: Select Normal Time, Time Before Shift, Overtime 1 Hours, Overtime 2 Hours, Off Day Hours, or Overtime 3 Hours

- Method

- No Shift: No calculate working hours
- Fixed Shift: Admit Start and End section to the corresponding working hours.

- Actual Time: On the basis of the user's authentication log, all the range of IN/OUT is handled.

- Overtime: On the basis of the attendance logs, [End] is admitted as the working hours after [Start] passes.

- Start, End: It should be entered precisely because the standard is the time to specify Pay Rate and enter the time range.

- **Advanced Settings:**

A user can detaily set the time unit, minimum time, maximum time and etc. about from Rate 1 to Rate 5 as the user enter above. (※ **For more information on setting method: [ex5\)TNA Settings](#)**)

- **Add** Newly register the input data.
- **Modify:** Modify and save the modified data.
- **Delete:** Delete the registered data.
- **Close:** Close the relevant window.

2.2.9.1.3 Set Schedule

When Work Hours setup is completed, register the work mode in accordance with the work schedule. Register the work schedule in a unique mode relating to the rotation working day using the registered Work Hours Registration Code. Rotation schedule can be registered up to 30 days.

- Enter information
 - Code: Enter unique code number (4-digit integer and alphabetic letters) / Name: Enter the title of distinguishable work mode.
- Define Holidays
 - Holiday: [Data Management] - Assign the holiday code registered in [Holiday Information]
(※ For more information on setting method: [Holiday Management](#))
 - Holiday Shift: Assign holiday code registered in [Shift Config]
 - With this setup, time and attendance is processed in the way of calculating the hours assigned in Work Hours registration on the assigned holiday (date).

■ Set Schedule

- **Start Date:** Select the date to start the schedule registration (It becomes the starting day of rotation schedule)
- **Repeat After:** Select the number of days for rotation (Normally in the unit of 7 days)
 - Set the number of days repeated in accordance with the Work Hours registered in [Shift Config]
 - With the number of set days selected, the number of set days is displayed on the list starting from the reference date at the bottom frame on the screen.
 - With the assigned work mode double-clicked, the work code registered in [Shift Config] is displayed.
 - With the entry column double-clicked, an input window pops up. Enter the code directly and then the user can enter data quickly by moving an input window using lower/upper keys. When the selected work day code is different from the input code, priority is given to the code that was entered directly.
 - Assign all the days so that there is no unassigned date by work days.

■ Pay Rate Rules

Set in more detail the added/deducted hours and counting processing, etc. at the time of processing time & attendance for Normal Time Detail, Time Before Shift Detail, Overtime1 Hours Detail, Overtime2 Hours Detail, Off Day Hours Detail, Overtime3 Hours Detail respectively.

(※ For more information on setting method: [Pay Rate Rules](#))

- **Add:** Newly register the input data.
- **Modify:** Modify and save the modified data.
- **Delete:** Delete the registered data.
- **Close:** Close the relevant window.

2.2.9.1.4 Apply Schedule

In Employee's Time & Attendance Assignment, a user can assign the time & attendance code of the registered employees on a lump sum basis. Check the applicable user in the check box in the screen below, select the applicable code in the time & attendance Assignment list (Code registered in([\[Set Schedule\]](#)), and then apply by clicking **Set** button.

For your reference, the user can also directly assign the time & attendance code of the applicable employee in the employee registration information.

C	ID	Name	Employee ID	Schedule

2.2.9.2 Set Special Shift

In the event special shift, work must be assigned separately from the work schedule registered in Work Mode Registration menu, work schedule previously registered is displayed as shown in the following figure by entering the applicable date and clicking Query. Upon double-clicking the applicable work code on the date of special work, it moves to Modify mode. Apply it by clicking **save** button after entering the work code to be modified. The modified data is processed in shade so as to be easily distinguished. Use this menu should you wish to apply other codes in part besides basic work mode. When there is any change, you can apply it to time & attendance again after performing modification work in advance.

Set Special Shift

In case of designating the special working, double click the certain date and input the value, register code to modify

- Search Option
- Branch: Query by work center available

- Department: Query by department available
- Start Date: 30-day work schedule is inquired based on the starting date.
- **Search:** Inquire the result in accordance with query option.

※ With the work code **double-clicked** on the special work day, a user can proceed to Modify mode - Click **Save**, then the modified data is distinguished in shade.

- **Save:** Modify and save the modified data.
- **Print:** Print the corresponding inquired list.
- **Save to File:** Save the corresponding inquired list as CSV file.
- **Close:** Close the relevant window.

※ Tip1: With your **mouse right-clicked** on Modify screen, [Select Shift] window pops up as follow.

The screenshot shows a software window titled "Set Special Shift". At the top, a message states: "In case of designating the special working, double click the certain date and input the value, register code to modify". Below this, there are input fields for "Branch" and "Department", both currently set to "**** ; Not Assigned". To the right, there are fields for "Start Date" (2016-05-24) and "Set Period" (14). Action buttons include "Search", "Save", "Print", "Save to File", and "Close".

The main part of the window is a table with columns: ID, Name, Employee ID, Branch, Department, Schedule, and a 30-day calendar grid. The first row of data shows ID 00000004, Name 1, Employee ID 00000004, and all other fields as "**** ; Not Assigned". The "Schedule" column has a dropdown menu open, showing options: "** : Not Assigned" and "1 : 5na". The calendar grid shows dates from 24 to 30, with some cells containing "**" and others containing "1 : 5na".

ID	Name	Employee ID	Branch	Department	Schedule	24 (T...)	25 (W...)	26 (T...)	27 (Fr)	28 (Sat)	29 (S...)	30 (M..)

2.2.9.3 TNA Management

2.2.9.3.1 Process Transactions

A user can apply the time & attendance calculated based on the registered settings. When time & attendance setup is completed, be sure to execute time & attendance processing for obtaining the result such as sign in/out, etc. before inquiring the result of time & attendance. To treat time & attendance, be sure to Assign work period, select the applicable employee in the check box, and click (lump sum, in part) processing. Afterwards, 'Complete' message pops up on Result column. The processed result can be checked in [\[Output Period Result\]](#) menu.

- **Set Period**
 - Set the work period to be processed for time & attendance. (Maximum of 31 days)
 - The date of the process transactions cannot include the future date.
 - **Ignore Modifications:** After checking the applicable option, at the time of time & attendance processing, the modified record manually input in Time & Attendance Result Modify menu among the previously **processed time & attendance is automatically changed (deleted) into time & attendance record.**
- **Process:** When selecting the employee to treat time & attendance after checking his/her name, 'Complete' message pops up on Result.
- **Close:** Close the relevant window.

2.2.9.3.2 Modify Hours

In the event there is any change in the employee's time & attendance result after processing, a user can manually input-modify the new value after double-clicking the applicable time on the menu. In case of entering modified sign in/out time, the user needs to enter the modified value along with tardiness, early leave, basic work hours, etc. altogether. (Not automatically calculated)

Of the items, the item equivalent to employee information is not modified. Modify it from the user information, and then treat the time & attendance again.

- **Search Option**
 - Branch: Query by work center available

- Department: Query by department available
- Search Period: Set the period to be inquired. (Maximum of 31 days)
- Search all record: Inquire about all records equivalent to the query option.
- incomplete record:
- **Search:** Print out the result equivalent to the query option.

※ Switch to modify mode by **double-clicking** the time to be modified - Apply by clicking Modify button after entering the data

- **Save:** Save the modified data.
- **Settings:** The Item inquired can be edited by the user. (※ For more information on how to set up: [How to set query items](#))

2.2.9.3.3 Output Period Result

It inquires the result of the process transactions for period. The inquired data can be saved in a file and printed out.

The screenshot shows a software window titled "Output Period Result". At the top, a message states: "Search TRA processed result per period. Results can be saved in file, or print". Below this, there are search filters: "Branch" and "Department" both set to "**** : Not Assigned". The "Search Period" is set to "2016/02/04" to "2016/05/04". There are two radio buttons: "Search all record" (selected) and "incomplete record". To the right of these are buttons for "Search", "Print", "Settings", "Save to File", and "Close". Below the filters is a table with the following headers: ID, Name, Employee..., Branch, Department, Title, Date, Day, Shift Name, Arr..., De..., La..., Ea..., Norma..., Time ..., Overti..., Overti..., Off Da..., Overti..., MONEY. The table body is currently empty. At the bottom left, it says "Result of search : 0".

- Search Option
- Branch: Query by work center available
- Department: Query by department available

- Search Period: Set the period to be inquired. (Maximum of 31 days)
- Search all record: Inquire all records equivalent to the query option.
- incomplete record:
- **Search:** Print out the result equivalent to the query option.
- **Save to File:** The inquired screen can be printed out. Click the button so that Print Preview screen pops up as follow. Click **Print** button to get a printout.

■ **Save to File:** The inquired data can be saved in a file (Excel CSV form). Click the button, and then save them as follow;

2.2.9.4 TNA Reports

Inquire attendance status by query options. The list of tardiness, early leave, and absence can each be inquired, printed out, and saved in a file.

Search Late Arrivals: Inquire the employee who arrives late at the first tap like the picture below.

The screenshot displays the 'TNA Reports' application window. At the top, a green banner reads: 'Search TNA status per search option. Late arrivals, early departures, absenteeisms can be searched, print, save as file'. Below this, there are three tabs: 'Search Late Arrivals' (highlighted in green), 'Search Early Departures', and 'Search for Absenteeism'. The 'Search Late Arrivals' tab contains the following search options:

- Branch: A dropdown menu showing '**** : Not Assigned'.
- Department: A dropdown menu showing '**** : Not Assigned'.
- Search Period: A date range selector showing '2016/05/04' to '2016/05/04'.

On the right side of the search options, there are three buttons: 'Search', 'Print', and 'Settings'. Below these buttons is a 'Save to File' button and a '< >' button. At the bottom of the window, there is a table with the following columns: ID, Name, Employee..., Branch, Department, Title, Date, De..., and Early Dep... The table is currently empty.

Search Early Department: Inquire the employee who departs early at the second tap like the picture below.

TNA Reports

Search TNA status per search option. Late arrivals, early departures, absenteeisms can be searched, print, save as file

Search Late Arrivals **Search Early Departures** Search for Absenteeism

■ Set Period

- **Summary Date:** Select the month to be counted and the unit of week (1st week ~ 5th week). The applicable period is selected in date zone. The period can be adjusted in the unit of day.

- **Ignore Modifications:** After checking the applicable option, the modified record manually entered in Time & Attendance Result Modify menu among the previously **processed time & attendance is automatically changed (deleted) into time & attendance record.**

- **Process:** When selecting the employee to treat time & attendance after checking his/her name, 'Complete' message pops up on Result.

- **Close:** Close the relevant window.

2.2.9.6.2 Modify Total Hours

In the event there is any change in the employee's time & attendance result after counting, a user can manually input-modify the new value after double-clicking the applicable time. In case of entering each modified time, a user need to enter all times such as tardiness, early leave, basic work hours, etc. altogether. (Not automatically calculated)

Of the items, the item equivalent to employee information is not modified. Modify it from the user information, and then treat the time & attendance again.

■ Search Option

- **Branch:** Query by work center available.
- **Department:** Query by department available.

- Search Period: Select the period to be inquired in the unit of month and week.

■ **Search:** Output the result equivalent to the query option.

※ With the time to be modified **double-clicked**, the user can proceed to Modify mode - Apply it by clicking Modify button after entering the data.

■ **Save:** Save the modified data.

■ **Settings:** The inquired item can be edited by the user.

(※ **For more information on setting method:**[How to set the query items](#))

2.2.9.6.3 Output Person Summary

Inquire the data counted. The inquired data can be saved in a file and printed out.

■ Search Option

- Branch: Query by work center available
- Department: Query by department available
- Search Period: Select the period to be inquired in month and week units.

(Maximum of 31 days.)

■ **Search:** The result for the search option can be printed out.

■ **Print:** The inquired screen can be printed out. Click the button so that Print Preview screen will pop up. Click **Print** button to get a printout.

■ **Settings:** The inquired item can be edited by the user.

(※ **For more information on setting method:**[How to set query items](#))

■ **Save to File:** The inquired data can be saved in file (Excel CSV form). Click the button and then save them as follow.

2.2.9.6.4 Output Period Summary

It inquires the result of total hours for period. A user can save in file and print the inquired data.

■ Search option

- Select Employee: Inquire each employee
- Search Period: Set the period to be inquired. ([Maximum of 31 days](#))
- Search all record: Inquire all record equivalent to every option.
- Incomplete record:

■ **Search:** The result of the search option can be printed out.

■ **Print:** The inquired screen can be printed out. Click the button so that Print Preview screen will pop up. Click **Print** button to get a printout.

■ **Settings:** The inquired item can be edited by the user. The user can edit the search options. (※ [For more information on setting method: How to set the query items](#))

■ **Save to File:** The inquired data can be saved in file (Excel CSV form). Click the button and then save them as follow.

2.2.9.7 Transfer Work Result to another

All the time and attendance results can be transferred to a separate external DB. However, external DB can be used when it is registered as UNIS_Work in ODBC Manager. External DB table should be created in the same property. (Refer. Table Layout). After selecting the menu and setting the period, a user can transfer Work Result, Work Summary, and Except Record to the designated DB.

* For further information on table property, contact the manager.

■ Transfer Option

- Trans Work Result: Transfer all the time & attendance results (Contents of wWorkResult Table).
- Trans Work Summary: Transfer all the time and attendance sums (Contents of wWorkSummary Table).
- Trans Except Record: Transfer all the exceptional records (Contents of wExceptRecord Table).

■ **Transfer:** Transfer all the data created within the designated period.

■ **Close:** Complete transferring the time and attendance results.

Ex) Transfer Work Result to another

Desired results and attendance data can be sent to DB. Be sent to DB is supposed to be registered in the ODBC Administrator.

1. [Control Panel] → [Administrative Tools] → [data (ODBC)] execution.

2. In the System DSN **Add** button.

3. "Microsoft Access Driver(*.mdb)" select, click **Finish**.

4. Input Data Source Name "UNIS_WORK" and click **select**.

5. Be transmitted in the database, select the path and name of the database, then click **OK**.

6. Click **OK**.

7. Attendance results, click the Transfer menu.

8. Be transmitted and transmit the data set period, then **Send** button.

- Trans Data

- Trans Work Result: Transaction Reports send

Prerequisites: Receive DB table layout = wWorkResult table layout format

- Trans Work Summary: Summary Reports send

Prerequisites: Receive DB table layout = wWorkSummary table layout format

- Trans Except Record: Except Record send

Prerequisites: Receive DB table layout = wExceptRecord table layout format

9. Edit the UNIS.INI file in the UNIS installation path as follow.

- Enter DB access information that has done the connection setting from UNIS_WORK in ODBC.

10. Restart UNIS_Server.

2.2.10 Meal Management

2.2.10.1 Meal Record Query

Under the terms of user-selected query to look for water logged.

- **Period Setting:** Set the period of the meal registration.
- **Basic Condition:** All the search. Search for the department and the terminal the user.
- **Detail Condition:** Department, Terminal, User
- **Meal:** Breakfast, Lunch, Dinner, Snack, Late Night Meal

- Result: Select the results of log file.
- Save to File: Current searching contents.

2.2.10.2 Statistics of Total Meal

During the set period print out the total and submission.

- Branch: Select a Branch.
- Department: Select a Department.
- Search Period: Select a Search Period
- Search: View begins.
- Print: Preview and print content is viewed.
- Config: Set and order of items to display.
- Save to File: View the contents of file.
- <>: Arrange the width of the column in the default value.

2.2.10.3 Individual Total Meal

Set the information on each meal. Set the information about each meal and combined with meal code.

Statistics of Individual Total Meal

Print meal costs per and the total meal costs per individual for specified periods

Select Employee: **** : Search all record

Period Setting: 2016/05/04 ~ 2016/05/04

Buttons: Search, Print, Settings, Save to File, Close

Branch	Department	ID	Name	Employee ID	Date	Breakfast(...)	Breakfast(...)	Lunch(Nu...	Lunch(Cost)	Supper(N...	Supper(C...	Late Nigh...	Late Nigh...	Snack(Nu...
--------	------------	----	------	-------------	------	----------------	----------------	-------------	-------------	-------------	-------------	--------------	--------------	-------------

- Branch: Select a Branch.
- Department: Select a Department.
- Search Period: Select a Search Period.
- Search: View begins.
- Print: Preview and print content is viewed.
- Config: Sets and order of items to display.
- Save to File: Views the contents of file.
- <>: Arrange the width of the column in the default value.

2.2.10.4 Set Meal Management

2.2.10.4.1 How to use Wizard

2.2.10.4.1.1 Initialization

Select whether the code value of all the meal is initialized or not.

The screenshot shows a wizard window titled 'Meal Management Wizard'. It has four steps: STEP 1 (Initialization), STEP 2 (Meal Code 1), STEP 3 (Meal Code 2), and STEP 4 (Set Meal Cost). STEP 1 is currently active and highlighted in green. The main content area of STEP 1 contains the following text: 'Initialization', 'Choose whether to initialize the value of all the meal code.', and 'Initialize existing setting value. Cannot restore once initialized. Proceed to initialize all meal code?'. Below this text are two radio button options: 'The initialization.' (which is unselected) and 'Keep the code values.' (which is selected). At the bottom right of the window are three buttons: 'Prev', 'Next', and 'Cancel'.

2.2.10.4.2 Meal Code 1

Set the information on each meal. Set the information about each meal combining with meal code.

Code	Name	Meal	Limit ...	Meal Time	
0000	Lunch	Lunch	0	00000~01700	
0001	Breakfast	Breakfast	0	00900~01000	
0002	Lunch	Lunch	0	01100~01400	
0003	Dinner	Dinner	0	01700~02100	

- Code: A unique code. (4 digits)
- Name: Code name.
- Meal: Select of Breakfast, Lunch, Dinner, Snack, and Late Night Meal.
- Meal Time: Hours of eating meal
- Limit Meal: The number of duplicated certificate of meals. However, when setting to 0, no limit the number of meals.
- Set: If the code does not exist, insert, otherwise update.
- Delete: Delete Code.

2.2.10.4.3 Meal Code 2

Set a meal code in combination with an original meal code.

C	ID	Name	Meal	Limit ...	Meal Time	
☐	0000	Lunch	Lunch	0	00000~01700	
☐	0001	Breakf...	Breakf...	0	00900~01000	
☐	0002	Lunch	Lunch	0	01100~01400	
☐	0003	Dinner	Dinner	0	01700~02100	

- Code: A unique code. (4 digits)
- Name: Code name.
- Day Limit: The number of times to eat a day. However, when setting to 0, no limit to the number.
- Monthly Limit: The number of times to eat a month. If setting to 0, no limit the number of times.
- Period Setting: Set the specified period to eat.
- Set: If the code exists, modify setting a user want. Otherwise, make the new code.
- Delete: Delete Code.
- Initialization: Initialize the screen setting. It doesn't affect the existing DB.

2.2.10.4.4 Setting Meal Cost

Set the cost of meal for each meal .

	Same Price	Menu1	Menu2	Menu3	Menu4
Breakfast	☐	1000	1000	1000	1000
Lunch	☐	2000	2000	2000	2000
Dinner	☐	3000	3000	3000	3000
Late Night Meal	☐	0	0	0	0
Snack	☐	0	0	0	0

- Same Price: In case that a user checks each meal, set the meal cost for all of the menu to setting costs on menu1.
- Menu1, Menu2, Menu3, Menu4: The cost of each menu.

2.2.11 Setting and management of the Side Menu

2.2.11.1 Menu Tree

- Click  button at the top of right side and use Menu Tree to find all the menu and access easily.

2.2.11.2 Main Menu

2.2.11.2.1 System

2.2.11.2.1.1 Change Master Password

- Click  button at the top of right side to change the password of the master administrator from the system menu in the main menu.

The image shows a "Change Master Password" dialog box. It has a title bar with a lock icon and the text "Change Master Password". Inside the dialog, there are three text input fields labeled "Old Password", "New Password", and "Confirm Password". At the bottom of the dialog, there are two buttons: "OK" and "Cancel".

** The maximum length to enter is 30 digits and English/Number/Symbol is available.

2.2.11.2.1.2 Database Backup

- Database Backup, which is in system menu in the main menu when clicking  button at the top of right side, is only supported in case of MS-ACCESS(MDB).

2.2.11.2.1.3 Controlling the server service

- Click  button to monitor and control the server window setting in the system menu in the main menu.

- UNIS_Server Service: Control UNIS Authentication Server Service.
 - Auto Start: If the service stops, it restarts automatically.
 - Stop: Stop the running service.
- UDB Server Service: Control the database server service.
- UWorker Service: Control the TNA server service.
- Command Service: Control command generation and treatment server service.

2.2.11.2.2 Log

2.2.11.2.2.1 Log Management

1) Access Log

Click  button to search the user's access log in the log menu in main menu.

The screenshot shows the 'Log Management' window with the 'Access Log' tab selected. The search criteria are set to 'Period: 2016-05-04 00:00 ~ 2016-05-04 23:59', 'Condition: Search All', 'Detail Condition: Search All', and 'Mode: Search All'. The search results are displayed in a table with columns: C, Date, Time, Terminal ID, User ID, Name, Employee..., Class, Mode, Type, Result, Property, External Device, and Coordinate. The table contains 15 rows of data, including successful and failed access attempts, and a 'Retrieve from Terminal' button at the bottom right.

C	Date	Time	Terminal ID	User ID	Name	Employee...	Class	Mode	Type	Result	Property	External Device	Coordinate

- **Period:** Set the period to search. For entire period search, uncheck the check box in .
- **Condition:** Set the search condition. Set a desired condition from all search Terminal / User / Visitor / Access Group search. (Searching in Group is the log the currently stored employee's information).
- **Details Condition:** Set the detailed search condition of the set condition. Detailed assignment is used for searching by ID.
- **Result:** Set the search condition for each authentication result. Search All/ Success/ Failure of authentication results are set.
- **Mode:** Set a desired Mode from Search All, Attend, Leave, Out, In, Breakfast, Lunch, Dinner, Supper and Snack.
- **Search:** Search authentication records to satisfy search conditions.
- **Delete:** Delete authentication records to satisfy search conditions.

※The deleted authentication log is re-uploaded from terminal. (In case of storing the authentication log in the terminal.)

- **Save to File:** Save searched records as CSV file.

- **Print:** Click **Print** button to activate the print menu button.

- Print preview: Preview the paper to print.
- Print Setup: Set the paper to print.
- Print: Print from the printer.

- **Retrieve from Terminal:** It brings authentication logs stored in a terminal to the server. When a terminal operates in S/N mode or N/S mode, it stores authentication logs in the terminal's internal memory if connection to the server is disconnected.

- After checking a desired terminal, press **Receive** button to get the authentication logs.
- Get all logs again: It gets all authentication logs stored in a terminal again.
 - When double-clicking the authentication records, if the corresponding terminal has DVR setting, the viewer of the recording video displays.

3) Terminal Audit Log

A terminal administrator searches details of operations executed at a terminal.

Retrieve from Terminal: It retrieve the audit log which is saved in the terminal into the server.

A user can check the logs that the administrator has done in the terminal.

Date: The time when the operation occurs.

Terminal ID: Display the terminal number.

Admin ID: Display the terminal administrator's ID.

User Name: Display the administrator's name.

Detail: Display the detail of operation.

(Add User, Delete User, Add Fingerprint, Delete Fingerprint, Control Default, Control Access, Initialization overally, Initialization setting, Initialization authentication log, and etc.)

4) Admin Logon Log

It searches logon logs to Remote Manager by an administrator.

5) Search Event Log

It searches Event Log.

Condition and Detailed Condition

- 1) Terminal State
 - A. Terminal Disconnected
 - B. Terminal Connected
 - C. Terminal Locked
 - D. Terminal Unlocked
 - E. Terminal Tamper
 - F. Terminal Attached
 - G. Terminal Lockdowned
- 2) Door State
 - A. Door Open
 - B. Door Close
 - C. Door Unlock
 - D. Door Locked
 - E. Door Forced
 - F. Door Not Closed
 - G. Door Restored
 - H. Lock Error
 - I. Not Monitoring
- 3) User Operation
 - A. Remote Door Open
 - B. Remote Door Unlock
 - C. Remote Door Lock
 - D. Remote User Attempt
- 4) Emergency State
 - A. Fire Sensor Start
 - B. Fire Sensor End
 - C. Panic Sensor Start
 - D. Panic Sensor End
 - E. Crisis Sensor Start
 - F. Crisis Sensor End
- 5) External Sensor
 - A. External Sensor 1 Start
 - B. External Sensor 1 End
 - C. External Sensor 2 Start
 - D. External Sensor 2 End
 - E. External Sensor 3 Start
 - F. External Sensor 3 End
 - G. External Sensor 4 Start
 - H. External Sensor 4 End

6) Search temporary record

Search or delete the record in UNIS_Temp.

When authentication log is delivered to the server, the server functions stores the log in UNIS main DB. If any problem occurs in this case, the record is temporarily stored in local DB (UNIS_Temp.mdb) so as to allow regular checking. The record is deleted after being stored in the main DB. Therefore, it is normal to be empty at all times.

7) Search terminal command

In the event of giving special command to the terminal such as user sync, etc. related with the interface with the other system, the applicable command language is stored in [tCommandDown] table, treated in order, and then deleted. Therefore, it is normal to be empty.

Log Management

When the command is applied to the terminal in case of user synchronization relating to integration with other system, those commands are saved in [tCommandDown] table and process accordingly and gets deleted afterwards. (It is normal to be empty)

2.2.11.2.2.2 Create log file

- Create Log file is the function that saves file by cutting log file within the fixed period when a user click the  button at the top of right side. The saved log file activates as a log with the merge function in another system.
- Log file name that is saved is created into the period ended date (YYYYMMDD).

Create Log file

Period 24 May 2016 ~ 24 May 2016 Create

Result Search All

Ex9) Create log file

Save the part of log file to make file.

1. Click **Create** button after setting the period.
2. Press **Save** button after specifying the location where a user want to save the file and file name.

2.2.11.2.2.3 Merge log file

Click  button at the top of right side, and a user can apply the log data in [Merge Log File] in the log menu.

The 'Merge Log file' dialog box features a title bar with a close button. It contains a 'File Name' input field, a 'Find' button, and a 'Merge' button. Below these is a 'Log Count : [0]' label.

Select the corresponding log file, click **Merge** button and add it.

2.2.11.2.3 Import/Export data

2.2.11.2.3.1 Data Query

When clicking  button at the top of right side, Data Query menu displays.

Data Query menu can search and save the information of users and visitors who are registered in UNIS according to the detailed condition.

The 'Data Query' dialog box has a title bar with a close button. It contains a search area with a green header 'Search/save user or visitor's info registered in UNIS according to certain criteria'. Below this are search criteria: 'Condition' (User), 'Name' (Search All), 'Detail Condition' (Search All), 'Code', and 'Search All' (checked). There are also checkboxes for 'Combination' (OR) and various authentication methods (Fingerprint, Password, Face, FP-Card, Card, MobileCard). A table with columns: C, ID, Name, Employee ID, Branch, Department, Title, Authority, Access Group, Schedule, Meal Code, Pay Rate, Authen. is shown. To the right of the table are buttons: Search, Delete, Save to File, Copy to USB, Send to Terminal, and Close. A footer message says 'Please set conditions to search log data'.

- Condition: User, Visitor
- Detail: Branch, Department, Access Group, Authority, T/A Code, Meal Code and Payroll Code

- **Code:** Details of the selected item from the registered code
- **Authentication Type:** Search in the combination of fingerprints, password, face, fingerprint card, card, mobile card and And/or condition.

Save to File: Click the button below to save the queried information.

Press **Copy to USB** button to export user to USB.

- **Assigned Administrator:** Only add the terminal administrator in the list.
 - **Copy:** The selected user from USB is saved in uniuser folder.
- The copied user data in USB can import the user to the terminal from USB by using User Import function.

Press **Send to Terminal** button to transfer the information into the terminal.

2.2.11.2.3.2 Import User From File

When clicking  button at the top of right side, Import User displays.

This is the function that imports the user's information from CSV file in case there are a lot of users to register.

- ① Press **Set** button to set the field to register.

To register normally, field name should be matched same on the base of the file.

- ② Press **Open** button to import CSV file where user information is entered.

2.2.11.2.3.3 Import Log From File

If the AC6000 terminal device is stored in an authentication record with the mainframe can bring it into the USB stick. ng

① After plugging in the USB memory AC6000 device to enter the menu below.

※ See the [AC6000 User Guide for detailed instructions](#)

② Select the event log (the menu features "event log" part is supported.) USB to save the log records.

③ After plugging in USB to your PC, check the imported file to extract the extrusion below.

- ac6000 > data > 00000001_logdata.tar Folder Extract
- File Name: Terminal ID8byte_logdata.tar (not change)
- 00000001_logdata.tar creating folders
- **ac6000 > data > 00000001_logdata.tar > 00000001_logdata.tar**

***In case of AC2200, AC2200 > Data > Terminal ID > log.dat**

④ **UNIS** - [Data Management] - [Import Log From File] - [Open] - 00000001_logdata.tar
Choose Folder - [OK]

In case of AC2200, select AC2000 – Data – Terminal ID Folder.

- ⑤ Importing Log
- ⑥ Log Import Completed: Skip redundant data is automatically.
- ⑦ Check Log: [Data Management] - [Log Management] - [Access Log]

2.2.11.2.3.4 User In/Out Board

When clicking  button at the top of right side, User In/Out Board menu appears. If Anti Pass back is running, check how many people are there and where they are. Also a user can track the moving path of each user in each area.

To check the user in that area, click **Search** button after checking the corresponding area.

If selecting the user, check the moving path of corresponding date.

2.2.11.2.4 Transfer to terminal

2.2.11.2.4.1 Terminal Control

- When clicking  button at the top of right side, Reset terminal emergency status menu appears. This function removes the situation manually when use following settings (fire/panic/emergency etc.) in server option. But ,in case of [Tools]-[Environment Settings]-[Alarm Option Setting], [Automatically terminates] choosing the option is automatically rested the status in accordance with option.

2.2.11.2.4.2 Lockdown Terminals

- When clicking  button at the top of right side, Lockdown Terminals appears. Access is blocked in specified terminal. Access door will not open even pressing exit control. Also in case of the emergency status such as fire, Access door is not open even if the terminal status is deleted.

2.2.11.2.4.3 Release Lockdown Terminals

- When clicking  button at the top of the right side, Lockdown Terminals menu appears. It releases the lockdown terminals function.

2.2.11.2.4.4 Door Control

- When clicking  button at the top of right side, Door Control appears.
- Open the door control: All the door of the selected terminal is opened for a second.
- Release the door lock: Delete all the door lock of the selected terminal.
- Set the door lock: Set all the door lock of the selected terminal.

2.2.11.2.4.5 Message Broadcast

When clicking  button at the top of the right side, Message Broadcast menu displays. An announcement function is only supported in AC5000, AC6000 and type an announcement as shown in below and send to the corresponding terminal, it will display on the LCD screen.

2.2.11.2.5.5 User Batch Editing

When clicking  button at the top of the right side, User Batch Editing appears. It arranges the user access group, TNA and meal codes in batches.

The screenshot shows a 'User Batch Editing' window. At the top, a message states: 'The ability to modify user access, TNA, meal codes in batches'. Below this, there are search filters under the 'Condition' section: 'Target' (User), 'Branch' (Search All), 'Department' (Search All), and 'Title' (Search All). A 'Search' button is to the right. Below the filters, there are 'Function' (Access Group) and 'Detail' (**** : Not Assign) dropdowns, followed by 'Apply' and 'Close' buttons. The main area is a table with columns: C, ID, Name, Employee ID, Branch, Access Group, Schedule, and Meal Code. The table is currently empty. At the bottom, there is a scrollbar and a 'Ready' status indicator.

C	ID	Name	Employee ID	Branch	Access Group	Schedule	Meal Code
---	----	------	-------------	--------	--------------	----------	-----------

Target: Search the user or visitor who meets that condition.

Department: Select Access group, Work code or Meal code

Function: Modify the checked user into the selected function in batches.

2.2.11.2.6 Settings

2.2.11.2.6.1 Wiegand Format Setting

When clicking  button at the top of the right side, Wiegand Format Setting appears. It sets wiegend in/out format and import and export from the terminal.

■ Set Wiegand Out

Wiegand support is available in the terminal for connecting external wiegend card readers or controllers. Note that in UNIS a fully customizable setting for Wiegand Input and Wiegand Output can be programmed. Standard 26bit, 34bit Wiegand, as well as a variety of settings are available in your environment. In addition, the parity, number of bits, data fields can be set and downloaded to the terminal. Here is how to set up for Wiegand Output.

- Bit Length: Length (Unused / St. 26bit / St. 34bit / Customize 중 선택)
 - Unused : When Disabled
 - St. 26bit : When the standard 26bit
 - St. 34bit : When the standard 34bit
 - Customize : Users when any designated date
- Custom Size: settings is Bit Length - [Customize] then Length select(Range: 1~128bit)
- Port State: Active Low(Basic) / Active High

- Site Code: if necessary, user settings (Settings range from the terminal: 0~255, UNIS can enter a range of others)

※ Tip: 26bit - 3byte(Site Code: 1byte + UID: 2byte) / 34bit - 4byte(Site Code: 1byte + UID: 3byte)

- · Send Fail: Authentication success signal + failure signal will be sent
 - Not Anything : When Disabled
 - Send Fail Data : failure signal will be sent
 - Invert Parity : Failure signal transmission E / 0 as opposed to output (E:Even Parity/O:Odd Parity)

- · Fail Data: settings is Send Fail - [Send Fail Data] then Fail Data format input

※ Tip: Fail Data: If entering 1234, 1=SiteCode/ 234=UID (ID: 3-digit)

- Bypass: If YES , Wiegand card readers to transfer card data is entered. It is transfer the input value itself.(NO(Basic)) Interval Time(us): 0 (설정하지 않을 경우 보통 2ms)

- Width Time(us): 0 (if a user do not set, Usually 50μs)

■ Field Type

- **S**: Site Code (1byte(=8bit))
- **D**: User ID data, Specifies the length of digits
- **0**: Data value to 0 if a user needs to specify a fixed
- **1**: Data value to 1 if a user needs to specify a fixed
- **O**: Verify the accuracy of odd bit
- **E**: Verify the accuracy of even bit

■ Set Field: Field Type value set to the right, select the item and to specify one.

Set Parity: Verify the accuracy range of Even Parity and Odd Parity

※ Tip: 26bit = Except for Even Parity , 12bit Specify +Except for Odd Parity , 12bit Specify

■ Set Wiegand In

Wiegand support is available in the terminal for connecting external wiegand card readers or controllers. Note that in UNIS a fully customizable setting for Wiegand Input and Wiegand Output can be programmed. Standard 26bit, 34bit Wiegand, as well as a variety of settings are

available in your environment. In addition, the parity, number of bits, data fields can be set and downloaded to the terminal. Here is how to set up for Wiegand Input.

The screenshot shows the 'Set Wiegand' software window. It has a title bar 'Set Wiegand' and a close button. Below the title bar is a green banner with the text 'Set wiegend in format and import and export from the terminal'. The main interface is divided into several sections:

- Wiegand Out / Wiegand In:** A tabbed interface. The 'Wiegand In' tab is active, showing a table with 'Code' and 'Name' columns. The table contains two rows: '0000' with '5000' and '0001' with '040'. Below the table are 'Input info' fields for 'Code' (0000) and 'Name' (5000), and buttons 'Register', 'Modify', and 'Delete'.
- Basic info:** A section with dropdown menus for 'Terminal', 'Bit Length' (set to 'Customize'), 'Port State' (set to 'Active Low'), and 'Output Type'. To the right are buttons 'Read from' and 'Send to Terminal', and input fields for 'Custom Size' (20), 'Site Code', 'Fail Data', 'Interval Time(us)' (0), and 'Width Time(us)' (0).
- Set Field:** A grid of 128 fields (1 to 128) for configuring data fields. Fields 1 through 5 are highlighted with colored boxes (0, 1, 2, 3, 4, 5, E). Fields 16 through 128 are empty.
- Set Parity:** A grid of 128 fields (1 to 128) for configuring parity. Fields 1 through 5 are highlighted with 'V' boxes. Fields 16 through 128 are empty.
- Field Type:** A list of field types with checkboxes: 'Unused', 'Card Data 1' (1), 'Card Data 2' (2), 'Card Data 3' (3), 'Card Data 4' (4), 'Card Data 5' (5), 'Odd Parity' (0), 'Event Parity' (E), and 'Point'.
- Card Data:** A section with a 'Data Type' dropdown (set to 'Unused'), a 'Digit Size' input field (0), and an 'Order' dropdown (set to 'MSBit : MSByte').

The status bar at the bottom left shows 'Ready'.

- Bit Length: Length settings
 - Unused : When Disabled
 - St. 26bit : When the standard 26bit
 - St. 34bit : When the standard 34bit
 - Customize : Users when any designated date
- Custom Size: settings is Bit Length - [Customize] then Length select(Range: 1~128bit)
- Port State: Active Low(Basic) / Active High
- Interval Time(us): 0 (if not setting, Usually 2ms)
- Width Time(us): 0 (if not setting, Usually 50μs)
- Field Type
 -  : Field not used at
 -  : Input Data 1

- **2** : Input Data 2
 - **3** : Input Data 3
 - **4** : Input Data 4
 - **5** : Input Data 5
 - **O** : Verify the accuracy of odd bit
 - **E** : Verify the accuracy of even bit
- Set Field: Field Type value set to the right, select the item and to specify one.
- Set Parity: Verify the accuracy range of Even Parity and Odd Parity
- ※ Tip: 26bit = Except for Even Parity , 12bit Specify +Except for Odd Parity , 12bit Specify
- Card Data
- Card Data Specifies the type specified in the [Set Field]
 - Unused : When Disabled
 - Binary : When Binary
 - Decimal String : When Decimal
 - Hexa String : When Hexa
 - Digit Size
 - Bit Order: Data transmission (MSB(Basic): Sequential Transfer / LSB: Reverse Transfer)
- ※ Tip: MSB: Most Significant Bit: The most significant bit: the first digit of binary numbers
 LSB: Least Significant Bit: Least significant bit: the last digit of binary numbers

2.2.11.2.6.2 Smart Card Layout Setting

When clicking  button at the top of the right side, Smart Card Layout Setting appears. It requires master authority, which set card layout.

The dialog box is titled "Smart Card Layout Information" and features a red close button in the top right corner. A dark banner at the top contains the text "This menu requires master authority, which set card layout". Below this, the "Card Information" section includes a "Card Capacity" dropdown set to "1K", a "Card Sector" input field with "16" and "ea", and "Card Type" radio buttons for "Standard Card" (selected) and "FP-Card". The "Standard Card" tab is active, showing an "Authentication Type" section with radio buttons for "Card Serial No" (selected), "Card Data", and "MAD". Below this is the "Serial Number Type" section with radio buttons for "Default" (selected), "Hexa String", "Decimal String", and "3.5 Decimal". The "No Language" section contains fields for "Sector", "Block", "Start" (set to "10"), "Data Length", "Key Type" (radio buttons for "KEY A" selected and "KEY B"), "Key Value" (six input boxes), and "Size of summary card data" (set to "0"). To the right of these fields are "Add", "Delete", and "Clear" buttons. At the bottom is a table with columns: Sector, Block, Start, Data Length, Key Type, Key Value, and AID Code. The table body is empty. At the very bottom of the dialog are three buttons: "Send to Terminal", "Apply", and "Close".

■ Card Information: Set up card type and card capacity.

- Card Capacity (Card Sector): 1K (16ea) , 4K (64ea) , 8K (128ea) of select
- Card Type: Standard Card / FP-Card

■ Standard Card

- Authentication Type: In case of the general card select the method
 - Card Serial No: Select a smart card to authenticate to the serial.
 - Card Data: Use of smart cards to authenticate specific data is to select..
 - MAD: If a user must choose how to use MAD.

- Serial Number Type: If a user chooses an authentication method [Card Serial No]
 - Default: 8-digit display with hex
 - Hexa String: Changing the order of Byte / 8-digit display with hex
 - Decimal String: hex to 10-digit display with decimal number
 - 3.5 Decimal : Change the hexadecimal number (8 digits) into decimal number (10 digits).

- Sector information: If a user chooses an authentication method [Card Data] or [MAD]
 - Sector: [Card Information] depending on card capacity, 000~127 select
 - Block: 0~2 block
 - Data Start / Data Length: Start of the data sequence number / Data Full length
 - Key Type: KEY A or KEY B
 - Key Value
 - Size of summary card

- Press **Add** button to save the entered sector information.

- After choosing the data on the list below press **Delete** button to delete it.

- Press **Clear** button to delete the entered sector information.

- Press **Send to Terminal** button to send the setting information to the terminal.

2.2.11.2.6.3 Issue Smart Card

When clicking  button at the top of the right side, Issue Smart Card appears. This function sets card format in advance when using fingerprint card. Set a site key value of the specified sector and block, in order to access via card according to the format which will be decided at a later stage.

※ **Registered card layout information correction and confirmation:** [Main Menu]-[Settings]-[Issue Smart Card].

2.2.11.2.6.4 Access Group Shift Settings

When clicking  button at the top of the right side, Access Group shift Settings appear. This function sets pertinent data where access group is not fixed or is changed regularly. All the users in those group will be changed to a modified group at a specified date accordingly.

The dialog box titled "Access Group Shift Settings" contains a message box at the top stating: "This function sets pertinent data where access group is not fixed or is changed regularly. All the users in those group will be changed to a modified group at a specified date accordingly". Below this is a table with columns: Access G..., Start Date, Repeat ..., and Access Shift Code. The table is currently empty. Below the table is the "Access Shift Schedule" section, which includes a dropdown for "Set Access Group" (currently showing "**** : Not Assigned"), a date picker for "Start Date" (set to 2016-05-04), and a dropdown for "Repeat After" (set to 7 Days). Below these is a table with columns: Date, Day, Access Shift Code, and Ent... The table contains data for dates from 2016-05-04 to 2016-05-10, all showing "**** : Not Defined". At the bottom of the "Access Shift Schedule" section are buttons for "Add", "Modify", and "Delete". To the right of the "Access Shift Schedule" section are three buttons: "Save", "Send to Terminal", and "Close".

Access G...	Start Date	Repeat ...	Access Shift Code

■ Access Group Shift Settings

- Set Access Group: Choose the shift access group.
- Start Date: Choose the start date which will be applied to access group.
- Repeat After: Choose the date from start date.
- Access Shift Code: By Double clicking the entering part choose the shift code on list.
 - Double click [Enter Directly] to enter the code directly.

- **Add:** Click **Add** button to add the entered contents to the list.
- **Modify:** Press **Modify** button to revise the entered contents.
- **Delete:** Press **Delete** button to delete the entered contents.
- **Save:** After completing entering, press **Save** to save.
- **Send to Terminal:** Press **Send to Terminal** button to forward to the applicable terminal.

2.2.11.2.6.5 Mobile Card Admin Setting

1) Mobile Card Manager Login

When clicking  button at the top of the right side, Mobile Card Admin Settings menu appears. It is the screen to login with Mobile Card registered administrator account.

The image shows a 'MobileCard Manager Login' dialog box. At the top, it says 'Login with MobileCard registered administrator account.' Below this are two input fields: 'Email Address' and 'Password'. There is a blue link labeled 'Purchase page link' below the password field. At the bottom, there are four buttons: 'Sign in', 'Logout', 'Sign Up', and 'Close'. Below the buttons, the text 'Failed to logon' is displayed.

Email Address: Email Address of the registered manager

Password: Password of the registered manager

Purchase page link: To issue the mobile card, a user should purchase in the assigned number. It connects with the corresponding site to purchase.

Sign in: It tries to log-in with the information of the registered manager.

Logout: Logout the manager.

Sign Up: Register or change the manager. If a user wants to change the manager, the user should log in with the changed information.

Close: Close the log in screen.

2) Mobile Card Manager Settings

2.2.11.4.2 Server Environment Setting

2.2.11.4.2.1 General

► User

■ User ID used as Unique ID (Automatic creation): If Unique ID is not used separately, it is replaced by user ID.

■ Allow terminal to overwrite users

: When importing from the terminal user management, the user information is overwritten.

■ Auto synchronize terminal when user info is modified.: If the user information is modified, the automatically modified information sends to the terminal,

■ Use blacklist user management: Check status of the blacklist.

► Authentication

■ Automatically upload log data from terminal

: When connecting the terminal, non transmitted authentication log data is sent from the terminal.

■ Save only successful authentication log: Authentication failure event can be checked only in monitor but it is not saved.

► Door

■ Save log for door open and close status

: It decides to save log data such as authentication success, inside open, compulsory open with remote.

- ▶ Transfer picture when record is sent
 - Transfer picture when record is sent: Send picture images with transmitting verified log data. (B_picture field should be in the external transmission table.)
 - Include authentication data: When inputting or outputting the user information, it is done including the authentication data.

- ▶ Access control
 - Restrict the use of access control admin.: The master administrator gives the access authority to the user who has management authority.
(Refer [\[Add User\]](#))
 - Non assigned access user not allowed to access: If the access group is not assigned, it restrict the access.
 - Blocking Time (Sec): Set the time value that restricts the authentication consecutively.

- ▶ Picture Information
 - Saving path to picture log (dat): terminal input / specify path to save the release of photographs taken.
 - Saving path to picture log (JPEG): time of path appointing, save in/out capture image by Jpeg.

- ▶ Security
 - Using the encrypted packets: Use the Seed encrypted packets.
 - User Information Encryption: Encrypt user name, serial number, password in remote access log-in.

- ▶ Other
 - Language: Set the server language such as mail.
 - Logo picture to home screen: Change the logo picture in mail screen.
 - **Clear Server Connect Info:** Delete all connected information from UNIS_Server Database.

※ Error will occur during multiple connection from UNIS_Server.

■ **DDNS:** Set DDNS server information.

- Enable: Set whether a user uses DDNS server or not.
- Host: Set Host ID.
- Update Term: Set the information update term from Host server to DDNS Server.
- Contract No.: Press **Apply** button to get the contract number from DDNS Server.

■ Terminal Connection Setting

- · port: Enter socket port number to connect terminal to server. (Basic Port: 9870)
- Connection status check interval: Connection status between terminal and server is checked with a time interval in setting.

■ Set cipher

- · Terminal ID Length (1~8): Set the desired number of ID digit.
- User ID Length (1~8): Set the desired number of ID digit.
- Unique ID Length (1~20): Set the desired number of ID digit.
- · Visitor ID Range: When adding a visitor, ID is added in the corresponding range in order.

■ Archive Period: Data Management > It specifies the numbers of days for data storage that is inquired at Data Management.

- Store Access Log: A standard unit is days, if setting 0, period for storage is unlimited. (100 = It means that records are deleted automatically after storage record for 100days)
- .. Store Event Log: A standard unit is days, if setting 0, period for storage is unlimited.
- .. Store Terminal Commands: A standard unit is days, if setting 0, period for storage is unlimited

2.2.11.4.2.2 Fingerprint

- **Set Finger Order** : If the number of fingerprint is limited to send to the terminal, send fingerprints according to the priority of fingerprint.

Set Finger Order [X]

If the number of fingerprint is limited to send to the terminal, send fingerprints according to the

Finger Name
Right thumb

Buttons: Reset, Move to Top, Move Up, Move Down, Move to, Apply, Cancel

- Allow similar fingerprints to be registered.

: **When registering the user's fingerprint, register without checking the similar fingerprint.**

- **If a user allows the similar fingerprint, the user cannot search with the user's fingerprint.**

It means if a user checks "Allow similar fingerprints to be registered", "Find user from fingerprint" deactivates like the picture below.

☒ Allow similar fingerprints to be registered

☐ Force user to enroll set No. of fingerprints (see value below)

☐ Find user from fingerprint

- **If a user doesn't allow the similar fingerprint, the user search is set automatically with the fingerprints.**

It means if a user doesn't check "Allow similar fingerprints to be registered", "Find user from fingerprint" deactivates like the picture below.

☐ Allow similar fingerprints to be registered

☐ Force user to enroll set No. of fingerprints (see value below)

☒ Find user from fingerprint

- Force user to enroll set No. of fingerprints (see value below)

: Register fingerprints as many as the number of fingerprints when checked.

- Find user from fingerprint

: Allow to find the user in the list with the fingerprint when searching for the user.

- Fingerprint Template Format
 - : Set Fingerprint Template Format (Default: UNION).
- Qty Fingerprints able to register
 - : Set the maximum number of fingerprints able to register. (1~10)
- Max. No. of fingerprints to send to terminals.
 - : The maximum number of fingerprints to be sent from the terminal when downloading user.

2.2.11.4.2.3 Emergency

■ Control terminals in fire

- When connecting with PIN which the sensing signal for fire is set in, it is available to process the corresponding event.

- Control range: In case of fire, set the terminal range to control.
 - 1) No control: Not control the terminal.
 - 2) Branch terminal control: Control the terminal which is set by the branch terminal. It opens the door.
 - 3) All terminal control: In case of fire, control the all terminals.
- Doors open: In case of fire, open the door.
- Sound alarm: In case of fire, sound the alarm.
- Automatically terminates: When the situation ends, it finishes the control automatically.

■ Control terminals in panic

- When connecting with PIN which panic status signal is set in, it is available to process the corresponding event.

- Control range: In case of fire, set the terminal range to control.
 - 1) No control: Not control the terminal.
 - 2) Branch terminal control: Control the terminal which is set by the branch terminal. It opens the door.
 - 3) All terminal control: In case of fire, control the all terminals.
- Doors open: In case of fire, open the door.
- Sound alarm: In case of fire, sound the alarm.
- Automatically terminates: When the situation ends, it finishes the control automatically.

■ Control terminals in crisis

- When connecting with PIN which the sensing signal for fire is set in, it is available to process the corresponding event.

- Control range: In case of fire, set the terminal range to control.
 - 1) No control: Not control the terminal.
 - 2) Branch terminal control: Control the terminal which is set by the branch terminal. It opens the door.
 - 3) All terminal control: In case of fire, control the all terminals.
- Doors open: In case of fire, open the door.
- Sound alarm: In case of fire, sound the alarm.
- Automatically terminates: When the situation ends, it finishes the control automatically

2.2.11.4.2.4 Necessary Contents

Set the necessary contents when registering a user, visitor, and terminal information.

The screenshot shows the 'Server Environment' application window. The title bar reads 'Server Environment'. Below the title bar, a green message says 'Set local environment and server environment'. On the left is a dark sidebar with a tree view. Under 'Local Environment', 'General' is selected. Under 'Server Environment', 'Necessary Contents' is selected and highlighted in blue. The main area has three tabs: 'User', 'Visitor', and 'Terminal'. The 'User' tab is active. It contains a section 'Check Required fields.' with an 'Apply' button. Below this is a table with columns 'C', 'Content', and 'Remark'.

C	Content	Remark
☒	ID	Required
☒	Name	Required
☐	Employee ID	
☐	Branch	
☐	Department	
☐	Title	
☐	Authority	
☐	Access Group	
☐	Schedule	
☐	Meal Code	
☐	Pay Rate	
☐	Telephone	
☐	Email Address	
☐	Address	

At the bottom of the window are four buttons: 'Reset', 'Ok' (green), 'Cancel', and 'Apply'.

2.2.11.4.3 Password Security Setting

[Remote Access Password Info] can be set up at [\[2.2.3.1. Add User\]](#)

The screenshot shows a 'Security' window with a sidebar on the left containing a tree view with categories: Local Environment, Server Environment, Mail Environment, Password Security (selected), TNA, and Other Module. The main area is titled 'Set local environment and server environment' and contains two sections: 'Password Use Options' and 'Password Generation'. In 'Password Use Options', 'Password Valid x Days' and 'No. Password Attempts' are both set to 0. 'Password Change at First Login' and 'Case Sensitive' are checked. In 'Password Generation', 'Repeat Password not Allowed', 'Consecutive Characters not Allowed', and 'Identical ID ,Password Not Allowed' are checked. 'Password Length' is set from 0 to 30. Under 'Character Limitation for Password', 'Uppercase Required', 'Lowercase Required', 'Number Required', and 'Special Character Required' are all checked. A 'Value' section on the right shows 'Method' as 'Defined Value' and 'Value' as '*****'. At the bottom are 'Reset', 'Ok', 'Cancel', and 'Apply' buttons.

■ Password Use Options

- Password Available Days: A user can login a designated password during this period.
- Authentication Failure Allowing Option: The number of possible re-entry as password isn't matched.
- Password Change required at the first log-on: When login at first, a user should change your password exactly.
- Case-insensitive: If checking this option, when inputting a password, It ignores Caps Lock(Capital)

■ Initial Value

- Initialization Method: Defined Value - (Default:1234) Administrator can set it. / Employee ID is designated automatically.
- Initial Value: Initial value to that extent that initialization method is designated value.

■ Password Generation

- Previous Password not Allowed: Previous password is not allowed to re-try.
- Consecutive Characters not Allowed: Consecutive Characters are not allowed. (ex. 1111 is not possible)
- Not allowed with the same ID and Password: If ID and password are same, a user is not allowed to input.
- Password Length Limitation: Setting password Length
- Character Limitation for Password: If checking this menu, a user can set Password Character Limitation

■ Password Character Limitation

- Uppercase Use Required: As inputting your password, Uppercase is required
- Lowercase Use Required: As inputting your password, Lowercase is required.
- Number Use Required: As inputting your password, Number is required.
- Special Character Use Required: As inputting your password, a special character is required.

2.2.11.4.4 Mail Environment

Terminal disconnected, Terminal Tamper, Door Forced, Door Not Closed, Lock Error, Emergency State, External Sensor, Blacklisted User Attempted Authentics. If event occurs that e-mail address to send details to set.

- Use mail Service: Used to check availability.
- Attach Picture: Check whether attach picture to log mail during sending.
- Security Type: Set No Security, TLS or SSL.
- Mail config
 - Mail Server: SMTP Mail Server (ex. smtp.mail.nate.com)
 - Mail Port: Basic 25 (Depending on the mail server change)
 - Mail ID: Mail account, enter your login ID (ex. master@nate.com)
 - Mail PWD: Enter email account password
 - Mail_FROM: mail account type (may be classified as spam, enter the correct email account)

※ Tip: Can be filtered to spam mail, accept email address from spam mail setting

- Sender: Settings displayed on the sender name (ex. Access Control Manager)
- Mail_TO: Enter the recipient email address(ex. master@nate.com)
- Mail_CC: Reference is receiving the input of the mail account (ex. master@unioncomm.co.kr)
- Mail_BCC: BCC is the input of the mail account (ex. master@unioncomm.co.kr)

※ In case of many receivers, put `;' before each people name.

- Select mail: Be sent to the event, select the item (Terminal disconnected, Terminal Detached, Door Forced , Door Not Closed, Lock Error, Emergency State, External Sensor)
- Press **Apply** button to send the test mail to the setting mail account.
- Setting an example

- Example) The list of sending mail.

2.2.11.4.5 TNA Settings

- Time and Attendance setting
 - Auto Process Time: Set the time and attendance time in 1 times daily automatically.
 - No. Decimals (Currency): The number of decimals to be able to enter when registering payment according to working hours.
 - Time Displayed As: Set the type of time display.
 - No. of Decimals: Set the number of decimals of time display.
 - Pay period: Total Period
 - First Day of Week: Set the first day of week
 - Calculate Daily: The last day of time and attendance.

- Calculate From: The last day of calculating total working hours.

■ Using Neis

This is the function that connects with the external system and the result of time&attendance. And then a user should start from the server.

After setting whether using or not, setting the path, a user should restart in uWorkServer.

The result of time&attendance is saved in the designated format in the corresponding path when processing time&attendance.

2.2.11.4.6 Other Module

■ Setting Paxton Net2

This is the function that sets the synchronization with Net2 Software.

- Used: Whether or not to use synchronization.
- IP Address: Server IP address which Net2 is installed in.
- Port: The server port which Net2 is installed in.
- ID: Net2 access ID
- Password: Net2 access password

3.3.3 Example of TNA Settings (Night Shift)

Night Shift: Example of the case where the range of attendance per day is 24 hours like frequent night shifts.

➤ Please set up following the mark

1. [TNA Settings]: Set/add time as below from [\[Shift Config\]](#)

Shift Config

Set a standard TNA management. Enter standard business hours and TNA process standard.

Code	Name
01	tna1
02	222
03	all night

Enter Information

Code Name

time sample : yesterday[-09:45], today[09:45], tomorrow[+0945]

Basic Clocking Config

Clocking Mode

Time Frame ~

☐ Ignore if Absent ☐ Late IN Time

☒ Multiple Daily Shifts ☐ Early OUT Time

Advanced Settings

Set Shift Times

	Pay Rate	Method	Start	End
Rate 1	Normal Time	Actual Time	00:00	00:00
Rate 2	Not Defined	No Shift	00:00	00:00
Rate 3	Not Defined	No Shift	00:00	00:00
Rate 4	Not Defined	No Shift	00:00	00:00
Rate 5	Not Defined	No Shift	00:00	00:00

Advanced Settings

① Code: Enter a two-character code consisting of digits or English alphabet letters without overlapping (Special characters are not allowed) / Name: Code Name

➤ Code: 44 / Name: Enter the ordinary days (ex. Working day, normal day, etc.)

② Clocking Mode

- Use all function keys: Acknowledge all the records inquired in [Log Management]-[Access Log] as the attendance record
- Use attend and leave keys: Acknowledge the first and last among the records, [Mode] of which inquired in [Log Management]-[Access Log] are Going to and Leaving from Work data.

☛ **Set [Use all function keys]**

③ Time Frame: Process the record of Going to and Leaving from Work within the applicable zone as the attendance

☛ **Normally set to 06:00~+12:00 that is night shift time zone
(In the event of going to work at 05:59 and going from work at 13:01 on the following day, it is not recorded as attendance)**

④ Set Shift Times: Split into a maximum of five types depending on options

☛ **Normal Time: All hours from the time when going to work until the time when leaving from work (Count it as the record of Going to and Leaving from Work within the applicable zone)**

※If there is Basic Work Time Standard, set in the same way as general workplace

- **Add:** Click this button to register the input data.

2. [TNA Settings]: Register the work type in accordance with the work schedule as follow in [\[Set Schedule\]](#)

Set Schedule

Register rotating business schedule by using registered working hour register code

3.3.5 Example of TNA Settings (Multiple Going to and Leaving from Work)

Multiple Going to and Leaving from Work: Applicable when the frequency of Going to and Leaving from Work is one or more times per workday. For example, it is the case where the work is divided into Morning work - Break - Afternoon work and the Times when going to and leaving from work is added to the range of Morning/Afternoon Work Range respectively.

Please set up following the mark

1. [TNA Settings]: Set/add time as below from [\[Shift Config\]](#)

Shift Config

Set a standard TNA management. Enter standard business hours and TNA process standard.

Code	Name
01	tna1
02	222
03	all night
04	Morning
05	Day
06	all night
07	multi tna

Enter Information

Code: 07 Name: multi tna

time sample : yesterday[-09:45], today[09:45], tomorrow[+0945]

Basic Clocking Config

Clocking Mode: Use all function keys

Time Frame: 06:00 ~ +06:00

Ignore if Absent: ☐ Late IN Time: 00:00

Multiple Daily Shifts: ☒ Early OUT Time: 00:00

Advanced Settings

Set Shift Times

Pay Rate	Method	Start	End
Rate 1	Time Before Sh Fixed Shift	08:00 ~ 12:00	
Rate 2	Overtime1 Hour Fixed Shift	14:00 ~ 18:00	
Rate 3	Normal Time Fixed Shift	08:00 ~ 12:00	
Rate 4	Normal Time Fixed Shift	14:00 ~ 18:00	
Rate 5	Not Defined No Shift	00:00 ~ 00:00	

Advanced Settings

Add Modify Delete Close

① Code: Enter a two-character code consisting of digits or English alphabet letters without overlapping (Special characters are not allowed) / Name: Code Name

☛ Code: Individual Entry / Name: Multiple going to and leaving from work

② Clocking Mode

- Use all function keys: Acknowledge all the records inquired in [Log Management]-[Access Log] as the attendance record

- Use attend and leave keys: Acknowledge the first and last among the records, [Mode] of which inquired in [Log Management]-[Access Log] are Going to and Leaving from Work data

※ Authentication record used for attendance is applied when such authentication was successful (The record of failure in authentication is disregarded from the attendance)

☛ Set to [Use all function keys]

③ Time Frame: Process the record of Going to and Leaving from Work within the applicable zone as the attendance

**☛ Normally set in broad range to 06:00~18:00 so as to include basic work range
(In the event of going to work at 05:59 and going from work at 06:01 on the following day, it is not recorded as attendance)**

④ Set Shift Times

☛ Shift1: Early Departure Time 08:00~12:00

☛ Shift2: Overtime1 Hours 14:00~18:00

※ Recognize the times when going to and leaving from work for early leave work as Morning Work, and those for overtime work as Afternoon Work

☛ Shift3: Normal Time 08:00~12:00

☛ Shift4: Normal Time 14:00~18:00

※ These are the settings to seek the basic work time by summing up the early leave work and overtime work hours as set above

⑤ Advanced Settings (Clocking)

Advanced Settings [X]

When setting business hours, create arrival/departure time automatically, set times that do not have to be on records, set multiple arrival/departure time periods

Time Frame: 06:00 ~ +06:00

- ① Enter Information: Code(Numeric format) / Name **Code: 0001 / Name: 26bit_01**
- ② Bit Length: Customize select / Custom Size: 26bit **Customize / 26bit**
- ③ Field Type: First, **E** Even Parity select . As shown above, Set Field area, click once. Other type is the same way too. **E: 1bit / S: 8bit / D: 16bit / O: 1bit**
- ④ Set Field: Is set as shown above..
- ⑤ Set Parity: First, "Set Field area **E** select , specified - From second bit to 13th bit. Next **O** select, specified - From 14th bit to 25th bit **E: 2bit~13bit / O: 14bit~25bit**
- ⑥ Click **Register** button to complete.

2. [Set Wiegand In Format- A]: 26bit (Card Data - 0xB2 0x34 0x74 -> 0xB2 0x34 0x74 input)

The screenshot shows the 'Set Wiegand' software interface. The 'Wiegand In' tab is active. The 'Basic info' section shows 'Terminal' set to 'Terminal', 'Port State' set to 'Active Low', and 'Bit Length' set to 'Customize' with a 'Custom Size' of '26'. The 'Set Field' grid shows a configuration for 26 bits, with the first 13 bits set to 'E' (Even Parity) and the next 13 bits set to 'O' (Odd Parity). The 'Set Parity' grid shows a configuration for 26 bits, with the first 13 bits set to 'E' and the next 13 bits set to 'O'. The 'Field Type' legend shows 'E' for Even Parity and 'O' for Odd Parity. The 'Card Data' section shows 'Data Type' set to 'Hexa String', 'Digit Size' set to '2', and 'Order' set to 'MSBit : MSByte'. The 'Register' button is highlighted with a red box and the number 7.

- ① Enter Information: Code(Numeric format) / Name **Code: 0001 / Name: 26bit_01**

② Bit Length: Customize select / Custom Size: 26bit ➡ **Customize / 26bit**

③ Field Type: First, select **E**. As shown above, click ④ Set Field area and set. Other type is the same way too.

➡ **E: 1bit / 1 (Card Data 1): 8bit / 2 (Card Data 2): 8bit / 3 (Card Data 3): 8bit / 0: 1bit**

④ Set Field: Set as shown above.

⑤ Set Parity: First select **E** on ④ Set Field area and specify – From second bit to 13th bit.

Next select **0** and specify – From 14th bit to 25 ➡ **E: 2bit~13bit / 0: 14bit~25bit**

⑥ Card Data: Card Number (0xB2 0x34 0x74) Type and Each digit Set, ④ Set Field area **1** click, is set as shown above. **2**, **3** this is enter the same way too.

➡ **1 (Card Data 1): Data Type - Hexa String / Digit Size - 2 / Bit Order - MSB**

➡ **2 (Card Data 2): Data Type - Hexa String / Digit Size - 2 / Bit Order - MSB**

➡ **3 (Card Data 3): Data Type - Hexa String / Digit Size - 2 / Bit Order - MSB**

⑦ Click **Register** the button: Completed

3. [Set Wiegand In Format- B]: 26bit (Card Data- 0xB2 0x34 0x74 를 0011678836(Decimal) input)

The screenshot shows the 'Set Wiegand' software interface. The 'Basic info' section has 'Bit Length' set to 'Customize' and 'Custom Size' set to '26'. The 'Set Field' section shows a grid of bit positions (1-128) with fields 1, 2, and 3 defined. The 'Set Parity' section shows a grid of bit positions (1-128) with parity bit 5 defined. The 'Field Type' section shows 'Card Data 1', 'Card Data 2', and 'Card Data 3' selected. The 'Card Data' section shows 'Data Type' set to 'Decimal String', 'Digit Size' set to '10', and 'Order' set to 'MSBit : MSByte'. The 'Register' button is highlighted.

① Enter Information: Code(Numeric format) / Name ➡ **Code: 0002 / Name: 26bit_02**

② Bit Length: Customize select / Custom Size: 26bit ➡ **Customize / 26bit**

③ Field Type: First, select **E** Even Parity . As shown above, ④ Set Field area, click once. Other type is the same way too.

➡ **E: 1bit / 1 (Card Data 1): 24bit / O: 1bit**

④ Set Field: Is set as shown above.

⑤ Set Parity: First, select **E** on Set Field area and specify - From second bit to 13th bit . Next **O** select, specified - From 14th bit to 25th bit

➡ **E: 2bit~13bit / O: 14bit~25bit**

⑥ Card Data: Card Number (0×B2 0×34 0×74) Type and Each digit Set, ④ Set Field area **1** click, is set as shown above.

➡ **1 (Card Data 1): Data Type - Decimal String / Digit Size - 10 /Bit Order - MSB**

⑦ Click **Register** button to complete.

4. [Set Wiegand In Format- C]: 26bit (Card Data- 0×B2 0×34 0×74 -> 178,13428(Decimal) input)

The screenshot shows the 'Set Wiegand' software interface. The 'Wiegand Out' table lists existing configurations. The 'Basic Info' section shows 'Terminal' set to '2', 'Bit Length' set to 'Customize', and 'Custom Size' set to '26'. The 'Set Field' grid shows a configuration for 26 bits, with the first 13 bits set to 'E' (Even Parity) and the next 13 bits set to 'O' (Odd Parity). The 'Set Parity' grid shows a configuration for 26 bits, with the first 13 bits set to 'E' and the next 13 bits set to 'O'. The 'Field Type' section shows 'Card Data 1' selected. The 'Card Data' section shows 'Data Type' set to 'Decimal String', 'Digit Size' set to '3', and 'Order' set to 'MSBit : MSByte'. The 'Register' button is highlighted.

■ Shift 1 ~ Shift 5

- Pay Rate: [Shift Config]- Title of the work set in [Set Shift Times] (**Inactive Window**)
- Rounding: Enable to set in accordance with time & attendance calculation standard such as applying all the minute units, rounding off 10 minutes, etc.
- Min. Time: Minimum time recognized. That is, if the basic work hours are 9 hours and the minimum one hour's work can be recognized as basic work, then the minimum time will be 1 hour. So if the basic work hour is 59 minutes, it cannot be recognized as basic work.

- **Max. Time:** Maximum time recognized. That is, if the basic work hours are 9 hours, although one worked for 13 hours as overtime work, the work hours recognized is 10 hours only where the maximum time is specified as 10 hours.
- **Rate:** Ratio of Extra Hourly Pay by Work Hours Zone for Calculation (Basic 100%, setting is changed in case night shift work, etc. is added)
- **Select Range:** [\[Shift Config\]](#)-Apply the zone value set in [\[Multiple going to and leaving from work\)\]](#)
 - ☒ Multiple Daily Shifts **Checking this item activates the setting window.**
- **Shift Auto OUT:** Recognized as sign-out if there is no record of sign-out for Multiple Sign in/out Zone Setup.

3.3.8 How to set the query items

Query item can be seen by setting it in accordance with the user management format. Click the button as follow; select the item to be inquired, and click **Apply** button. Only then will the selected items be displayed on the list.

Essential items can be moved to other positions, but the item itself may not be excluded from selection.

The screenshot shows a software interface with a search bar at the top. Below the search bar, there are several filters and buttons. The 'Assigned' dropdown is set to 'Assigned'. The 'Search Period' is set to '2016/05/04 ~ 2016/05/04'. The 'Search all record' radio button is selected. The 'Settings' button is highlighted with a red box. Below the filters, there is a table with columns: Employee..., Branch, Department, Title, Date, Day, Shift Name, Arr..., De..., La..., Ea..., Norma..., Time ..., Overti..., and Ove....

- **Settings:** Press the button to bring up the following window.

Search Config

Set search criteria per user management format. Select criteria and click apply button and save, only the selected criteria will be shown in the list. Mandatory criteria can move position, but cannot be removed.

3.4 Face Authentication in Server Mode

3.4.1 Introduction

This document is based on the Activation.pdf document from NEURO technology Co.,Ltd, which provides face authentication algorithm. For more detailed information, refer Activation.pdf.

3.4.2 Activating License

3.4.2.1 Activate with Activation Wizard program.

Unzip a file in UNIS installation path after downloading the license activation program to show the following file. (If unzipping a file in the path including characters, not English, a user can fail the gain of license in UNIS. (A user should unzip a file in the English folder.)

Name	Type	Compressed size	Password ...
Licenses	File folder		
Activation	Adobe Acrobat Document	387 KB	No
ActivationWizard	Application	501 KB	No
id_gen	Application	64 KB	No
msvcp110.dll	Application extension	156 KB	No
msvcr110.dll	Application extension	463 KB	No
NCore.dll	Application extension	458 KB	No
Neurotec.dll	Application extension	125 KB	No
Neurotec.Licensing.dll	Application extension	13 KB	No
NLicensing.dll	Application extension	192 KB	No
pg	Application	173 KB	No
pgd.conf	CONF File	1 KB	No

When running the program Activation Wizard.exe, the following window appears.

Press **Yes** button to show the following picture like below.
According to license type, select a mode.
Select Single PC with Licensing Service and **Finish** button.

Press **Finish** button, the following license activation screen appears like below.

When checking the detailed information tap from task manager, 'pg.exe', which is Activation service program, runs.

※ 'pg.exe' is the program that communicates the face authentication SDK and API.
If a user does the forced termination, the function of face authentication is not worked.
Please be careful.

To activate the license, press **Browse** button and attach the issued license file (*.sn).

**** When using USB dongle license, the serial license (*.sn) is not needed.**

In general, attach *.sn file as the following picture below.

When pressing **Open** button, the file is added as below.

Add Licenses and Serial Numbers

Add licenses and serial numbers
In order to continue, please load some licenses and serials from files or enter serial numbers manually

Add from files
D:\Union_Community_Co._Ltd._FaceMatcher_8000_267.sn Browse

Enter serial numbers
Press here to enter new serial number ... Paste

< Back Next > Cancel

When pressing **Next** button, the following window appears.
And when pressing **Activate**, the license file appears.

Add Licenses and Serial Numbers

Activate serial numbers
Press 'Activate' and let all serials finish activation process

Serial	Product	Distribute	Number	Status
AB4D-85C...	Face Matc...	8000	267	

Serial number activation requires internet connection. In order to start activation process, please press 'Activate'. If you experience problems during activation process, you can save generated computer hardware id for selected failed activation and either try to activate manually through http://www.neurotechnology.com/software_activation.html or contacting

Show hardware id Activate

< Back Finish Cancel

※ When pressing **Activate** button, the fixed license activates in the corresponding PC.
After that, the corresponding license cannot be used in the other PC, please be careful.

Activate

After completing , "Activated" appears on the status window.

Add Licenses and Serial Numbers

Activate serial numbers
Press 'Activate' and let all serials finish activation process

Serial	Product	Distributo	Numbe	Status
AB4D-85C...	Face Matc...	8000	267	Activated

 Serial number activation requires internet connection. In order to start activation process, please press 'Activate'. If you experience problems during activation process, you can save generated computer hardware id for selected failed activation and either try to activate manually through http://www.neurotechnology.com/software_activation.html or contacting

When pressing **Finish** button, Licenses folder is created and the license file appears as below.

이름	수정한 날짜	유형	크기
 FaceMatcher_Windows.lic	2016-04-28 오후...	License	2KB

※ Please Keep your license file after the separate backup not to be deleted because it affects the face authentication action and it is used in **Deactivate**.

3.4.2.2 Activation Error

If attempting to activate or deactivate your license several times, a user may encounter the following error.

Add Licenses and Serial Numbers

Activate serial numbers
Press 'Activate' and let all serials finish activation process

Serial	Product	Distributo	Numbe	Status
AB4D-85C...	Face Matc...	8000	267	License for this serial number was generated too many times. Please contact Neurotechnology (support@neurotechnology.com) for more information

press 'Activate'. If you experience problems during activation process, you can save generated computer hardware id for selected failed activation and either try to activate manually through http://www.neurotechnology.com/software_activation.html or contacting Neurotechnology support at support@neurotechnology.com

Show hardware id

Activate

< Back

Finish

Cancel

If an error occurs, please send an activation request to Neurotechnology's customer support email (support@neurotechnology.com) directly, as the screen messages above.

3.4.2.3 Activating in Web site

Activate the license through the link site below with computer id file.

<http://www.neurotechnology.com/cgi-bin/nla.cgi>

Regarding to how to create Computer id file, please refer to "2.2.1 Single computer license" items, which is Activation.pdf file.

3.4.3 Deactivating License

To deactivate the license, a user can move the license to the other PC.

※ If a user often run a license Activate and Deactivate, the user may not be able to use the license according to Neurotechnology licensing policy. Please refer the Activation.pdf file for more information.

3.4.3.1 Deactivate with Activation Wizard program

If pressing **Deactivate** button in Activation Wizard, the list of licenses appears as follows:

Select the license a user wants to deactivate and press **Deactivate** button.

If pressing **Deactivate** button, the warning message appears as below and the deactivation processes.

If Deactivate successes, License deactivated is marked in Status.

3.4.3.2 Deactivation Error

If the deactivation fails, the following message appears as below.

After that, "DeactivationIds" folder is created in the same folder and the following two files are created.

이름	수정한 날짜	유형	크기
FaceMatcher.lic	2016-04-20 오후 5:50	License	2KB
FaceMatcher_deactivation.id	2016-04-28 오전 11...	ID 파일	6KB

please send a deactivation request by sending the two files to Neurotechnology's customer support email (support@neurotechnology.com) directly.

3.4.3.3 Deactivation with Website

With the files generated from items, a user can proceed to deactivate from the following site.

<http://www.neurotechnology.com/cgi-bin/nlz.cgi>

3.5 About MobileCard

3.5.1 Mobile Card Admin Setting

1) Mobile Card Manager Login

When clicking  button at the top of the right side, Mobile Card Admin Settings menu appears. It is the screen to login with Mobile Card registered administrator account.

The image shows a 'MobileCard Manager Login' dialog box. It has a title bar with the text 'MobileCard Manager Login' and a red close button. The main content area has a dark background with the text 'Login with MobileCard registered administrator account.' in green. Below this, there are two input fields: 'Email Address' and 'Password'. There is a blue link labeled 'Purchase page link'. At the bottom, there are four buttons: 'Sign in', 'Logout', 'Sign Up', and 'Close'. Below the buttons, the text 'Failed to login' is displayed.

Email Address: Email Address of the registered manager

Password: Password of the registered manager

Purchase page link: To issue the mobile card, a user should purchase in the assigned number. It connects with the corresponding site to purchase.

Sign in: It tries to log-in with the information of the registered manager.

Logout: Logout the manager.

Sign Up: Register or change the manager. If a user wants to change the manager, the user should log in with the changed information.

Close: Close the log in screen.

2) Mobile Card Manager Settings

MobileCard Manager settings.

Import mobilecard setting info or connect to the server and register administrator.

C	ID	Name	Telephone	Issue Co...	Access Date ...	Automatic Re...	Status
---	----	------	-----------	-------------	-----------------	-----------------	--------

- ◆ Expiration Date Range: Search the user to issue the mobile card with the following condition.
- ◆ Automatic Renewal: Select the inquired user, set whether automatic renewal or not and reflect the list pressing the **Modify** button. And then the setting information of automatic renewal applies in the mobile card server.
- ◆ Manual synchronization: If bringing back the users from the terminal after uploading, when only running NIS B Plus and the terminal, it synchronizes the information such as mobile card access period and KeyNo from the mobile card server.

3.5.2 Mobile Card Information

- To use the mobile card, a user should register the administrator first.
(Refer [Mobile Card Administrator Setting](#))

The screenshot shows the 'MobileCard Information' form. It has three input fields: 'Period Setting' with dates '2016-05-03' and '2017-05-03', 'Country Code' with the value '82', and 'Mobile Number' with the value '01012341234'. There is a checkbox labeled 'Immediately issued when the register' which is currently unchecked. A purple 'Discard' button is located at the bottom right of the form.

- Period Setting: Set the period of mobile card access. (Up to 1 year from the current time)
- Country Code: Country code for the international phone call.
- Mobile number: A User's mobile number
- Immediately issued when the register: After checking the corresponding menu, if the mobile card is not issued, it transfers the mobile card sending message in SMS when adding or deleting the user.
- Discard: Discard the issued mobile card.

**** If a user wants to check whether mobile card is issued or not, double click the corresponding user in the list and the user can find it.
In case of the user whose mobile card has already been issued, the window in Mobile Card Information is deactivated.**

The screenshot shows the 'MobileCard Information' form in a deactivated state. The 'Period Setting' dates are '2016-05-24' and '2017-05-24'. The 'Country Code' and 'Mobile Number' fields are empty. The 'Immediately issued when the register' checkbox is now checked. The 'Discard' button remains visible.

3.5.3 Mobile Card Issue Management

1.1.1.1.1 Mobile Card Batch Apply

The screenshot shows a web application window titled "MobileCard Issue Management". At the top, there is a dark banner with the text "Manage mobilecard issuance. Search batch user issuance or history of issuance". Below this, there are two tabs: "MobileCard Batch Apply" (which is active and highlighted in green) and "MobileCard Issue History". Under the "MobileCard Batch Apply" tab, there is a "Condition" section with two radio buttons: "Within 1 months" (selected) and "UnIssued User". To the right of these buttons is a "Search" button. Further right, there is a date input field showing "2016-05-03 18:05" with a calendar icon, followed by a tilde symbol and the text "A year later". To the right of this is an "Apply" button. Below the "Condition" section is a table with the following columns: "C", "ID", "Name", "Employee ID", "Country Code", "Telephone", "Period", and "Status". The table is currently empty.

It searches the users whose mobile card expiration date is less than a month or mobile card is not issued yet and issues the mobile card for them.

- **Search:** Select a target to search.
- **Apply:** Click **Apply** button, and issue the mobile card at once for the inquired user.

1.1.1.1.2 Mobile Card Issue History

The screenshot displays a web application window titled "MobileCard Issue Management". At the top, a dark banner contains the text "Manage mobilecard issuance. Search batch user issuance or history of issuance" in green. Below this, there are two tabs: "MobileCard Batch Apply" and "MobileCard Issue History", with the latter being the active tab. The interface includes a search section with the label "Condition" and two input fields: "Mobile Number" and "Name". To the right of these fields are two buttons: "Search" and "History Search". Below the search section is a table with the following columns: ID, Name, Mobile Number, Date, Admin, and Status. The table body is currently empty.

ID	Name	Mobile Number	Date	Admin	Status
----	------	---------------	------	-------	--------

It searches the issue history of the mobile card.
