

RIPETITORE VELA 220V

Radio repeater to increase the
signal range. Integrated radio
transceiver 433.92 MHz.
Switching power supply 110-240 VAC.

WARNINGS

- Installation must be carried out only by qualified technicians in compliance with the electrical and safety standards in force.
- All connections must be made with the power turned off.
- Use suitable cables.
- Do not cut through the aerial (see picture 1.1b)
- A suitably sized disconnection device must be set up on the electric power line that supplies the product.
- Disposal of waste materials must fully respect local standards.

1 PRODUCT FEATURES

1.1 TECHNICAL DATA

Power supply	From the grid 120-240 Vac
Radio frequency	433,92MHz
Range	120 m in free field
Protection rating	IP20
Operating temperature	-20 +55 °C
Dimensions	52X43X21

1.2 DESCRIPTION

Radio repeater to increase the signal range, ideal for controlling far-off devices or those positioned on a different floor from the control unit.

The innovative software avoids the undesirable reception of “double commands” when the device receives commands both from the remote control and the repeater.

The ISM (industrial, scientific and medical) radio frequency band guarantees a long range, even through walls and ceilings.

Simple programming with dip-switches, reduced dimensions with breakable tabs (pic. 1.1c) for fixing with screws (pic. 1.2a) or for insertion into connection boxes up to 55 mm in diameter.

3 USE OF THE CONTROL UNIT

This control unit is conceived to be used in combination with a wireless system composed of a transmitter and a receiver (already connected to each other). Its aim is to receive the "original" signal of the transmitter and to amplify it towards the receiver, in order to intensify the default range of the transmitter. To obtain a good quality of the signal, see an example of installation in Pic.3, showing a VELA receiver and a VELA TONDO transmitter. The repeater needs to be placed within the limit of the wireless range of the receiver.
